Dear Friends and Partners,
What's new? Which electrotechnical developments can you expect in the coming year, which intelligent solutions will shape the residential and commercial construction market? You will find the answers to these questions on the following pages. Together with contractors and wholesalers we have developed a whole range of promising innovations once again that are not only innovative but above all are relevant to your everyday needs. We will be presenting the best of these to you in this catalogue.

At the same time, on the next few pages you will be meeting many well-known friends once again: Tried and tested products and solutions from Hager, which have already demonstrated their reliability and user-friendliness in tens of thousandsof installations. As a full-service provider, today we can offer professionals everything they need for energy distribution and cable routing, meter panel, room connection and security systems, as well as building automation, switches and socket outlets. This offers a huge additional value for installers and planners. Since you get the entire full range of solutions and services from one source. This makes electrical installations not only easier and faster, but also more reliable, efficient and successful.

Since there is nothing that cannot be improved, on, we are constantly looking for new and better solutions. We are continually exchanging ideas with our customers, analysing their needs and implementing them in pioneering innovations. For you as a planner or installer, this means that not only do you get the best solutions today - but you will be leading with us in the future, too.

We look forward to achieving this together with you,

## Your reliable partner

Hager is your specialist for electrical installations in residential and commercial construction. The Hager brand has stood for comprehensive system offers for decades: The highest quality, innovative products, modularity, easy assembly, simple operation, comfortable application, good service and stylish design characterize Hager.

## A brand that delivers what it promises

As a specialist for

- Energy distribution and meter panel systems,
- Cable routing and room connection systems,
- When it comes to switch ranges, building automation and security and safety systems such as danger alarm systems, smoke detectors and motion detectors, Hager is the comprehensive supplier for professionals.

High quality, innovative technology, user-friendly solutions and the special closeness to customers make Hager a reliable partner for electrical engineers and planners.

## Innovations in the Service of the Customers

Innovations and the systematic enhancement of the products and systems characterize the Hager brand. Our aim has always been to stand at the forefront of development with innovations and enhancements.

At Hager, innovations and new technologies are always geared towards the needs of the customers. In thousands of contacts and discussions that Hager has every year with customers and partners, we find out what the practitioners need to work successfully and efficiently. With this knowledge as a basis we develop the innovative solutions that make the Hager brand so characteristic, for easy assembly, comfortable application, intuitive user interfaces, modularity and consistency are brand values that guarantee consistent premium quality with Hager systems.

80 percent of the products and systems at Hager are less than five years old. This high degree of innovation provides our customers with a wide choice of solutions for dealing with many new challenges effectively. A good indicator of this user-oriented product policy is the strong demand for innovations and further developments of the Hager brand.

Hager belongs to the Hager Group, an owner managed family business with a tradition that spans more than 50 years. The globally active group employs a staff of 11,400 employees and generated a total turnover of more than 1.6 billion euros in 2012. Today, the entire product range of the Hager Group includes about 74,000 items.

The Hager Group has production plants at 22 locations in 11 countries worldwide. The sales network in 82 countries is supported by 20,000 sales outlets of the wholesale partners. Thanks to its close relations to customers and dealers, the brands of the Hager Group have a strong local and regional presence.

The Hager Group currently employs 790 engineers in Research and Development (R\&D) and allocates approx. 5 percent of its turnover for R\&D. As a result, around 170 developments are registered as patents annually.

Since 2007, the Hager Group has been a European company (SE Societas Europaea) and thus underlines its cultural diversity as well as its European roots.

## Humane. Environmentally friendly. Efficient. <br> 

ethics
environment
energy
"Quidquid agis respice finem" - Whatever you do, think about the consequences! This motto which is attributable to the Greek poet Äsop (in 600 BC ), applies today more than ever. As a result of technical progress, increasing globalisation and decreasing natural resources, the consequences of our actions are becoming increasingly serious - and the demands for more corporate responsibility are becoming increasingly louder. Even if the Hager Group is just a small wheel in this big machine, we want to play our part so we can leave a clean legacy for future generations. We have summarized this understanding of sustainability in a concise term: E3.

E3 is a comprehensive approach of the Hager Group for utilizing the limited resources of our planet sparingly. The three "E"s stand for the three columns of our sustainability: Ethics, Environment and Energy. In German: Ethik, Umwelt und Energie. Each E conceals a specific catalogue of measures that the Hager Group has expressly committed itself to.

Everyone is talking about sustainability. As a family business we want to live it actively - with E3!
> "We act ethically and responsibly by caring for our fellow human beings and our environment."

Daniel Hager

People are the most important natural resource for us. For this reason we are doing everything to support our 11,000 and more "energy sources" worldwide and to mobilize new "forces" for the Hager Group. We are certified "Investors in People"- and rely on structured processes that ensure fair dealings with each other. In addition, we have committed ourselves to compliance with the United Nations Global Compact. It is entered on a voluntary basis between businesses and the UNO for the purpose of shaping globalization in a more social and environmental way. And not least, we care for the wellbeing of every single employee in the Hager Group through locally targeted Care Management.

We are also extending this Care Management to our environment - by keeping it as clean as possible. For this reason, we work worldwide according to the motto, "to make more from less". Eleven production plants of the Hager Group are already certified in accordance with the ISO 14000 international standard and new ones are added to this each year. During product development and production, we rely on Eco-Design and Eco-Production. In the course of this, the entire life cycle of a product (Life Cycle Assessment) is assessed and optimized in terms of ecological considerations. Once the product is finished, we pack it in a way that is not harmful to any tree: in $100 \%$ recycled cardboard. This earned Hager the iF Packaging Design Award in 2011. In this way, we continually reduce our ecological footprint - while accelerating technical progress at the same time.

## $\square$ energy

It goes without saying, of course, that we also help our customers to reduce their ecological footprints: with intelligent meters and innovative visualization software we make power consumption visible and enhance energy awareness. Many of our appliances - including dimmers, presence detectors as well as intelligent KNX building automation - actively help to reduce power consumption. And not least of all, the innovative system of Hager also allows regenerative energy sources to be integrated future-proof into each building. In a word: We expend our whole energy - so that you can save yours!

You can find detailed information on E3 at www.hagergroup.net, sustainability.

# A design language that everyone understands: Hager Design 

For over five decades, Hager has attached the greatest importance to the functionality and reliability of its systems. This is also reflected in the form of our products: Design is not superimposed as beautiful wrapping on the technology, but is developed in harmony with the functions. The external reflects the internal structure. And this external structure is becoming increasingly important nowadays: As electrical installations increasingly take over direct functions both in the office and in the home, the greater is the need to take aesthetic aspects into consideration. In order to meet these requirements - functional and aesthetic - even better, the Hager Group together with the designer Erwin van Handenhoven has established an independent design agency: Hager-Winco.

"Everything you see and touch underlines the idea of simplicity and quality."

[^0]
## From the cupboard to the switch

The Hager product range has grown tremendously during the last few decades. Hager has advanced from being a specialist for meter panel systems to a complete electrotechnical supplier for smart homes and intelligent, purpose-built buildings. With cable routing systems and room pillars, exclusive switch ranges and intuitive user interfaces, design requirements have increased as well: Each product has a different function, and each function requires its form design. Thus, Hager speaks a design language with many styles.

## From the customer to the designer

To ensure that this design language is understood everywhere, we also give our customers the opportunity to participate: Since time immemorial, Hager has been developing its systems in close collaboration with specialist dealers and selected final consumers. We research national traditions, determine individual desires and pay very close attention when our customers' hearts beat faster. The results are ergonomically shaped solutions that appeal emotionally: through simple installation and operation, through the highest quality and maximum comfort.
We call this process "Voice of Customer".

## From the present into the future

In order to meet the growing requirements of our customers even better in future, we established the independent design agency "Hager-Winco" in May 2009. As a result, the longstanding collaboration between Hager and the internationally active product designer Erwin van Handenhoven has now entered a new phase. This has resulted in numerous product highlights that meet the design requirements of tomorrow in particular. You can already find many of these today in the new Hager catalogue.

We wish you lots of fun during your discovery!

# Little details that make a big difference 

## Why Berker socket outlets are simply good

It's often the small details that make a big difference. Berker's sockets are a perfect example of this: we have been producing them for over 90 years, and specialist craftspeople use them every day. And there are always product details which can be improved - and, when taken together, can make a major difference.

- Compact housing with sturdy, closed base
- Rugged supporting ring without sharp edges
- New support ring contour for easy alignment and screwing in
- Easy-to-connect conductor
- Open claw geometry prevents damage to the conductors during assembly
- No parasitic voltage thanks to electrical isolation
- Flexolift claw vanishes completely into the base
- Release or screwing-in in just 4 to 5 rotations

We have even optimised the packaging, and thus the handling on the building site: in a 10-pack, the centre plates are separated from the inserts and can be mounted according to your normal installation methods.. In addition, the centre plates are well-protected by film a sensible detail to save time and money.

- High-quality supporting ring sturdy, with no sharp edges, and additional screwing options for easy installation on soft surfaces
- Optimal supporting ring contours marked for precise alignment at the place of installation
- Test marks on the base for visibility in every mounting state
- Easy-to-operate release buttons for rapid release of conductors during disassembly
- Cross-head claw screws with optimised thread for 3x faster installation/removal
- Labelling field on the supporting ring for clear labelling of the electric circuit
- Cross-head screw in centre plate for perfect grip of tool during assembly
- Marking on base
for precise stripping of conductors
- Sturdy, enclosed base
for safe, secure installation

- Galvanic separation of the supporting ring
for safe working with no parasitic voltage

Open claw geometry
prevents damage to conductors during installation

- Claws are accomodated in base
when fully retracted, for easy
insertion/positioning in the switch box and reduced risk of injury
- Optimised terminal design
for easier insertion of conductors

- Screw-in lift terminals ${ }^{1}$
for rapid connection and secure positioning of the conductors

[^1]
# Used thousands of times but still unique 

## Simple switch replacement with the modul system

Admittedly, we're still a bit proud. In the Modul system, we found a principle which has not lost any of its attraction. Using the Modul system, switches can still be replaced easily, even after years have passed, and, for example, be adapted to a new room design, without any need to replace the switch insert. For your customers, this means less building mess, more flexibility in room planning and increased general satisfaction with their electrical equipment. Our Modul system can also offer you many advantages, such as less storage and lower mounting costs. As well savings in terms of time and money.

In addition, we have designed the switches and inserts to be completely uncomplicated in mounting and handling.

- Flat appearance of the mounted switch and pleasant feel during operation through the very small switching angle of $3,5^{\circ}$
- High level of operating comfort through precise rocker guidance
- Flexolift claws ensure a tight fit and forced return when released
- Cable protection around the claw screws prevents conductor damage
- Laser engraving of the circuit diagram, circuit symbols, article number and conductor insulation length on the rear side of each switch
- Easy-to-operate lever release catches to free the conductors
- Installation of neon lamp units at a later date possible without dismantling

- High-quality supporting ring
sturdy, no sharp edges, with additional screwing options for easy mounting on soft surfaces

- Optimal supporting ring design marked for precise alignment at at place of installationt
- $3,5^{\circ}$ switching angle
for a flat profile
and easy switching
- Modular design
for accomodation of
all rocker types
- Large clearance around the claw screw with cross-head screws for easy mounting
- Variable 4-pin mount for precise seating of rockers

- Clip-in neon/glow lamp unit for exact positioning on the supporting ring, can be used as indicator or orientation light

- Moulded lever release catches
for easy release of conductors
- Labelling on reverse of switch
showing order no, circuit diagram/graphical symbol, conductor stripping guide

- Cable protection
to prevent damage to the conductors by the claw screws

- Flexolift-claws
for flush-fitting positioning of
claws and automatic reset upon
release
- Minimal installation depth
providing maximum space for
installation of the insert in hollow-wall mounting

## Light control

From the elegantly beautiful switches, through the intelligent control of individual lamps through to clever lighting systems: we can offer you a wide range of light control variants. common to all of them is that they can be supplemented, replaced and modernised easily, thanks to our modular system.

- All the rockers, covers and electronic application modules of our standard and comfort ranges fit perfectly on the flush-mounted inserts.
- Switches, dimmers or timers can be combined with all the switch ranges.
- Simple switch to a new switch range by exchanging frames and covers.
- Continuous further developments with innovative products mean that modern lighting (LEDs, compact fluorescent lamps) can be switched and dimmed easily.

## Berker K.1/K. 5

## Rocker with imprinted symbol for bell

- Large labelling field
- for illumination and monitoring circuit
- Lens
- also for KNX applications: push-button, 1gang, and group push-button, 1gang

Labelling field ( $\mathrm{W} \times \mathrm{H}$ ) $\approx 54.8 \times 42.8 \mathrm{~mm}$

For labelling with names, notes etc.
Labelling field height designed for two 18 mm P-touch strips.
Lenses available in orange and clear.

## Glow and neon lamp units

565 Marked items are only suitable for splash-protected IP44 flush-mounted installation when used in conjunction with the corresponding sealing set.

## Incandescent lamp unit with $\mathbf{N}$ terminal

Not suitable for push-button and pullcord switches, rocker switches and rocker push-buttons from the years 1985 to 1995.
Refer to the overview for the matching flush-mounted inserts.

| Design | Order no. | PU |
| :--- | :--- | :--- |
| brown, 6V, 35 mA | $\mathbf{1 6 7 6}$ | 10 |
| yellow, $12 \mathrm{~V}, 65 \mathrm{~mA}$ | $\mathbf{1 6 7 6} \mathbf{0 2}$ | 10 |

| red, $48 \mathrm{~V}, 25 \mathrm{~mA}$ | $\mathbf{1 6 7 6} \mathbf{0 3}$ | 10 |

## Neon lamp unit with $\mathbf{N}$ terminal

When several neon lamp units are used, the lamp current may result in malfunctioning of the relay/pulse relay. Remedy: Carry along a neutral conductor or connect a capacitor 230 V ( $1 \mu \mathrm{~F}$ per 10 mA neon lamp current) in parallel with the coil.
Not suitable for push-button and pullcord switches,
rocker switches and rocker push-buttons from the years 1985 to 1995.
Refer to the overview for the matching flush-mounted inserts.

## Neon lamp unit with $\mathbf{N}$ terminal

Not suitable for water-protected installations with IP44 degree of protection.
When several neon lamp units are used, the lamp current
may result in malfunctioning of the relay/pulse relay.
Remedy: Carry along a neutral conductor or connect a capacitor $230 \mathrm{~V}(1 \mu \mathrm{~F}$ per 10 mA neon lamp current) in parallel with the coil.
Suitable for push-button and pullcord switches, rocker switches and rocker push-buttons for the years 1985 to 1995.
Not suitable for water-protected, flush-mounted installation IP44.
Refer to the overview for the matching flush-mounted inserts.

| Design | Order no. | PU |

## LED units

- Low storage and logistics costs by reduction to only three variants
- Long service life of the LED

860 Marked items are only suitable for splash-protected IP44 flush-mounted installation when used in conjunction with the corresponding sealing set.

## LED unit 230 V, for switches/push-buttons

Refer to the overview for the matching flush-mounted inserts.
When several LED units are used, the LED current may result in malfunctioning of the relay/pulse relay.
Remedy: Carry along a neutral conductor or connect a
capacitor 230 V ( $1 \mu \mathrm{~F}$ per 10 mA LED current) in parallel with the coil.
Not suitable for push-button and pullcord switches,
rocker switches and rocker push-buttons from the years 1985 to 1995.

Rockers for barrier-free construction

- For the matching contrast frame for visual highlighting, refer to the appropriate Design line.
- SCHUKO socket outlet with tactile symbol (see corresponding design line)
- For rockers with lenses, the IP44 degree of protection can only be achieved in conjunction with the appropriate neon, incandescent or LED lamp unit.

The following rockers are conformant with DIN 18024-2 and DIN 18025-1 and -2.

- cepran

Marked items are only suitable for splash-protected IP44 flush-mounted installation when used in conjunction with the corresponding sealing set.

## Motion detector

The more your house looks after you, the less things you have to keep in mind. A motion detector ensures that your path is always lit automatically when you come home. It can switch the light in the stairwell, corridor or toilet on automatically when you need it. Thanks to its precise detection, it guarantees perfect monitoring of any area of the house, thus scaring off uninvited guests. Berker controllers can meet all your comfort and safety requirements, and also help to save energy. This is because they only switch the lighting on automatically, when they detect movement within their defined detection field.

- Simple switch to another design by exchanging frames and covers.
- The wide range of motion detectors offers the perfect solution for every installation situation.

## BLC -Berker Light Control

## BLC triac insert (R, L)

Operating voltage
Frequency
230 V incandescent lamps and halogen lamps
Dimmable conventional transformers
Operating temperature
Light scene function (On/Off) in conjunction with BLC radio button.

Possible to change fuse without removing cover.
$\varepsilon$

Design

Order no. PU
BLC triac insert (R, L) 2905

## BLC tronic insert ( $\mathrm{R}, \mathrm{C}$ )

Operating voltage
230 V~
Frequency
230 V incandescent lamps and halogen lamps
Electronic transformers
Operating temperature
Light scene function (On/Off) in conjunction with BLC radio button.

For trouble-free operation, we recommend Berker Tronic transformers.
$\varepsilon$

Order no. PU
BLC tronic insert (R, C) 2916

- when cover is detached, the switch status is retained (wallpaper function)
- bulb-preserving soft startup
- phase cut-off
- very low noise
- with extension unit input for BLC extension unit, BLC controller extension unit for motion detector and pushbutton, NO contact
- short-circuit and overload proof (electronic fuse)
- insert suitable for BLC buttons
- with screw terminals

BLC relay insert
Operating voltage
Frequency
Breaking capacity
230 V incandescent lamps and halogen
lamps
Fluorescent lamps:

- uncompensated
- parallel compensated
- in Duo circuit
Conventional transformers
$20 / 60 \mathrm{~Hz}$
2300 W
2300 W
$\mu$
For electronic ballasts and energy-saving lamps with excessive switch-on currents, use switch-on current limiters order no. 185
Light scene function (On/Off) in conjunction with BLC radio button.
Neutral conductor necessary!

Design
BLC ralay

BLC relay insert
Order no. PU

2906

- when cover is detached, the switch status is retained (wallpaper function)
- with extension unit input for BLC extension unit, BLC controller extension unit for motion detector and pushbutton, NO contact
- also usable as push-button relay switch
- insert suitable for BLC buttons
- with screw terminals

Suitable for Order no. Page
optional
Making current limiter 185

## BLC relay insert

- Potential-free contact

Operating voltage
Frequency
230 V~

Minimum load (at 12 V )
50/60 Hz
100 mA
800 W
750 W
230 V halogen lamps
Operating temperature

max. 10
22 mm
$-20 \ldots+45^{\circ} \mathrm{C}$
Light scene function (On/Off, dimming value) in conjunction with BLC radio button.

Trouble-free operation will be obtained only with Berker Tronic transformers.
Do not connect conventional transformers together with electronic transformers.

Design
BLC universal touch dimmer (R, L, C)

## BLC 1-10 V push-button control unit

Operating voltage
230 V~
Frequency
$50 / 60 \mathrm{~Hz}$
Switching current
3.04 A

Control current
50 mA
Operating temperature
$+5 \ldots+35^{\circ} \mathrm{C}$
Light scene function (On/Off, dimming value) in conjunction with BLC radio button.

In case of excessive switch-on currents use switch-on current limiters order no. 185.
$\mu$
To ensure same illumination, use only electronic ballasts and fluorescent lamps from the same manufacturers.

When using LV halogen lamps, we recommend Berker 1 - 10 V Tronic transformers, 105 W , order no. 2977.

Neutral conductor necessary!
Interface to according to DIN EN 61347-2-3

Design
BLC 1-10 V push-button control unit

BLC extension unit for motion detector
Operating voltage
230 V~
Frequency 50/60 Hz
Number of substations max. 10
Number of extension units (for order no.
max. 5
2902)

Cable length between main unit and
max. 100 m
extension unit
nsertion depth
22 mm
Neutral conductor necessary!

Design
BLC extension unit for motion detector
Order no. PU

2908

- when cover is detached, the switch status is retained (wallpaper function)
- bulb-preserving soft startup
- phase cut-on or cut-off according to load type, selflearning
- very low noise
- switch-on brightness level can be stored safe after power failure
- with extension unit input for BLC extension unit, BLC controller extension unit for motion detector and pushbutton, NO contact
- short-circuit and overload proof (electronic fuse)
- expandable with universal power boosters RMD Plus with load cable switched in parallel
- insert suitable for BLC buttons
- with screw terminals

## BLC insert for timer

Operating voltage
Frequency
Conductor cross-section (rigid)
Control cable length
Insertion depth
Operating temperature
230 V
50 Hz
$\max 4 \mathrm{~mm}$
max. 100 m
22 mm
$+5 \ldots+35^{\circ} \mathrm{C}$
Note:
Note:
Delay time setting, switch-off prewarning and functions for off/automatic/continuous on are carried out on the BLC timer RMD for the stairway light.
For 3-conductor circuit with neutral conductor and for 4 -conductor circuit with neutral conductor or phase.
For upgrading of stairwell light and pulse circuits without additional wiring.
Only suitable for BLC controller with imprint release issue "R3".

## BLC controller

## BLC controller comfort 1.1 m

Delay time, adjustable immunity time $\approx 10 \mathrm{~s} . . .30 \mathrm{~min}$
$\approx 3 \mathrm{~s}$
Time to dim down
Short time mode
Nominal mounting height
Detection angle
Detection field, semi-oval shaped
Range, frontal
$\approx 10 \times 12 \mathrm{~m}$
$\approx 10 \mathrm{~m}$
each $\approx 6 \mathrm{~m}$
$\approx 20$... $100 \%$
Response sensitivity, settable
Response brightness, adjustable $\approx 0 \ldots 80 \mathrm{~lx}, \infty \mathrm{~lx}$ (day)
Dimensions assembling height 23.5 mm
Operating temperature $-20 \ldots+45^{\circ} \mathrm{C}$
Continuous direct sunlight penetrating the upward-pointing detection plane can result in failure of the controller. Only suitable for indoor areas!
In conjunction with a BLC relay insert HVAC, the HVAC channel is also switched on for the duration of its delay time, independent of the response brightness.
Switches on for the duration of the controller delay time when the minimum response brightness level is infringed and if people are detected.

height
Response brightness, adjust- $\approx 10 \ldots 1000 \mathrm{Ix}, \infty \mathrm{Ix}$ (day) able
Dimensions ( $\varnothing \times$ assembling
$103 \times 42 \mathrm{~mm}$
height)
Operating temperature
$+5 \ldots+35^{\circ} \mathrm{C}$
The purpose of the presence detector with constant light control is to save energy by dimming/switching off lighting when unoccupied or when ambient light level is sufficient. Furthermore, it facilitates presence-dependent activation of heating/ventilation systems in conjunction with the BLC relay/switch insert HVAC.
Application areas e.g. office buildings, schools, hotels and nursing homes.

## Surface-mounted housing for BLC and KNX presence

Radio interference suppressors for controllers

## Blind control

A single action - and you can darken, brighten, open or lock any room to people outside. When combined with timers or sensors, all of this can happen automatically at times you set yourself or when the weather is bad. In this way, a Berker blind controller not only provides controlled sunlight penetration and temperature, but also tangibly more safety.

- Time-controlled raising and lowering of blinds.
- Twilight-controlled blind movement.
- Retraction of awnings or window closing according to precipitation or wind.
- Monitoring of windows and doors against glass breakage.
- Shut-out protection against blind lowering when the patio door is open.

- indication of the next operation schedule under consideration of astro and coincidence function
- large-area display with symbols
- for the sensor connection on the clamping block in the insert
- with surface-mounted RolloTec brightness sensor shutter and lamella position additionally settable
- when a surface-mounted RolloTec brightness sensor is connected, twilight-controlled lowering possible
- RolloTec brightness sensor for sun blind movement up/down can be connected
- lock out protection because evaluation of the centre or extension unit commands can be switched off
- lamella position programmable at down operation times
- with automatic summer-/winter time switching (can be switched off)
- with a total of 3 independent programme memories
- 2 programme memories preset
- astro programme for sunrise/sundown switching
- programming according to week and days possible
- programme memory network failure proved
- with German display text

## HVAC control

People need warmth - but when? Where exactly? And how much? Our room thermostats give each of your rooms the right temperature and turn it down automatically when the room is unused.

- These days, heating, cooling and air-conditioning are inseparable from the concept of saving energy. This means that it is even more important to be able to control room temperatures individually.
- Reduction of the room temperature by $1^{\circ} \mathrm{C}$ produces energy savings of approx $6 \%$. That's a good reason to control the temperature of less-used rooms like bathrooms or bedrooms according to need.
- Our conventional thermostats allow you to control all the standard heating types (hot water, electrical etc.).
- In addition, the electronic devices work controlled by time, meaning that rooms can be run using specific temperature profiles - as individually as is required.
- Valve drives for heating valve bases mean that radiators and underfloor heating can be included in the control system quickly and perfectly.

## Speed controllers

606
Marked items are only suitable for splash-protected IP44 flush-mounted installation when used in conjunction with the corresponding sealing set.

## Speed controllers

Operating voltage
Frequency
Motor nominal and slat current
Fine-wire fuse
Loss power at full load
Axis dimension $\varnothing$
Possible to change fuse without removing cover.

230/240 V~ - phase cut-on
$50 / 60 \mathrm{~Hz}$ - short-circuit and overload proof (fine-wire fuse)
max. 0.1 ... 2.7 A - with spare fuse
T 3.15 H 250 V - basic speed adjustable

- for devices with motory drive
- with rotary on/off switch
- additional switching contact for blade control
- with plug-in terminals
$\varepsilon$

# Communication/ Multimedia technology 

Whatever new options communication and entertainment technologies open up - Berker means they can also be integrated perfectly. Our multimedia socket outlets, for example, offer ideal connections for laptops, beamers, PC monitors, mobile terminals and HiFi systems, as well as for all the newest entertainment electronics devices. Our flush-mounted radio offers perfect reception in any room. And our USB charging socket outlet helps to charge up the batteries of mobile phones and smartphones, digital cameras and games consoles and give them new energy. All of these functions are easy to install, are available for all Berker switch ranges and are thus the most direct method of bringing the future into your home.

- Multimedia socket outlets for modern entertainment electronics
- Best reception with the flush-mounted radio
- Charging smartphones, cameras und consoles using the USB charging socket
- Available for all Berker standard and comfort ranges
- The communication and multimedia connection technology means that the jungle of cables is a thing of the past - both at home and at work

## Berker S.1/B.3/B. 7

Variety was never easier to obtain. You can combine all the rockers, central inserts and frames of the switch programmes S.1, B. 3 and B. 7 however you desire. We'll be showing you the whole range of options on the following pages. Have fun selecting and combining!

- Reduced stockholding due to use of rockers and central inserts from the S.1, B.3, B. 7 design lines

- additional benefit by combination of a socket outlet with an orientation light
- long service life of the LED
- white LED light
- integrated brightness sensor that switches the orientation light on at twilight and off when there is sufficient brightness
- 2pole + earth
- through-wiring possible, therefore also ideal for retrofitting
- with screw-in lift terminals

Caution!
Items with special flush-mounted insert.
Centre plates with LED orientation lights are not comparible with the standard socket outlets.

## Hospital installation

Emergency system

## Emergency call set with frame

Operating voltage $24 \mathrm{~V}=-$ acoustic and visual signalling of an emergency call us-

Operating temperature
$-5 \ldots+40^{\circ} \mathrm{C}$
Set consisting of:

- Pullcord with frame, order no. 5202.
- Pilot lamp with frame, order no. 5203..
- Shut-off push-button with frame, order no. 5201..
- Power supply with frame, order no. 5204..

The emergency call set is used to call for help in public or disabled WCs, doctors' surgeries and old people's homes. It corresponds to the safety requirements according to DIN VDE 0834 ing pilot lamp after the pullcord push-button has been actuated

- switch-off of emergency call using shut-off push-button at emergency location
- power supply via power supply unit with 24 V AC
- centre plates for plug-in fixing
- monitoring of devices triggering calls for wire break
- acoustic call tone switchable on pilot lamp
- call tone can be set as continuous signal or as pulses
- with screw terminals

| Suitable for | Order no. | Page |

## Berker S. 1

Berker S. 1 stands for "Standard" in two different aspects: on the one hand, because this switch range has set real standards in the fields of elegance, functionality and timelessness. On the other hand, because these qualities have made it a popular standard in offices and homes.

- Modular concept, ergonomic design and square shape guarantee ease of handling.
- Clean form harmonises with extremely diverse surroundings and is suitable for a wide range of applications.
- Combination frames allow you to combine up to 5 devices vertically or horizontally.
- Available surfaces: polar white matt, white and polar white glossy

## Berker B. 3

Contrasts enrich life, and, with B.3, contrasts are essentially built in. Highly-individual combinations can be created from a wide range of frame variants with polar white and anthracite rockers and central inserts. An absolute innovation are the B. 3 frames, made of black, brown, gold or red anodised aluminium.

- Incisive design with high-quality aluminium frame
- Integrates perfectly into any modern interior design style - whether in the home or office
- Combination frames allow you to combine up to 5 devices vertically or horizontally.

## Berker B. 7

Gives every switch the right frame: In addition to glass frame varieties, the Berker B. 7 is now available with plastic, stainless steel and aluminium frames. This version is a harmonious addition to the switches of the Berker TS Sensor and Berker B.IQ ranges.

- High-quality designs in glass, stainless steel, aluminium and plastic
- Complements Berker TS Sensor and Berker B.IQ
- Multiple frames vertical or horizontal for up to five devices

## Modul 2

A programme with clear lines, for almost any room or function. And the whole thing comes with an attractive price-performance ratio: Modul 2 is the simplest switch solution there is.

- Perfect for housing and commercial buildings
- With a glossy white or polar white surface
- Multiple frames vertical or horizontal for up to five devices

## Surfaces

Frames / Covers / Central inserts
Plastic, glossy
white

## Berker Q. 1 / Q. 3

Quality always comes at a price, but the Berker Q. 1 and Q. 3 are noteworthy exceptions. They also excel through an unusually attractive price performance ratio.

- The quality of design can be seen in the fact that the centre plates and at the upper edge of the frame, creating a flat contour

## Hospital installation

Emergency system

## Emergency call set with frame

Operating voltage $24 \mathrm{~V}=-$ acoustic and visual signalling of an emergency call us-

Operating temperature
$-5 \ldots+40^{\circ} \mathrm{C}$
Set consisting of:

- Pullcord with frame, order no. 5202..
- Pilot lamp with frame, order no. 5203..
- Shut-off push-button with frame, order no. 5201..
- Power supply with frame, order no. 5204..

For installation in standard wall boxes according to according to DIN 49073-1
The emergency call set is used to call for help in public or disabled WCs, doctors' surgeries and old people's homes. It corresponds to the safety requirements according to DIN VDE 0834
Design Order no. PU

## Berker Q. 1

You notice the difference the first time you touch it: thanks to its innovative surface, this likable all-rounder has an unmistakable velvety feel - and in elegant anthracite now in an additional attractive colour variant. With its smooth profile, flat switching angle and soft, rounded edges, it is very pleasant to look at.

- Suitable for both residential and non-residential buildings
- Due to the large radii, particularly suitable for projects such as schools and kindergartens
- Combination frames allow you to combine up to 5 devices vertically or horizontally.
- Available surface: polar white, velvety lacquered anthracite

## Berker Q. 3

Robust. Hardly any term describes the Berker Q. 3 better. On the hand, there is its clear contour, on another its scratch-resistant and friendly surface. It is equipped with the same centre plates as its sister programme Berker Q.1. Its functional benefits are also noteworthy: the Berker Q. 3 is ideally suited to installations in dado ducts.

- Together with the radii of the central plates, the clear, cornered frame forms a design contrast, which can be ideally integrated into the architecture of modern buildings.
- Combination frames allow you to combine up to 5 devices vertically or horizontally.
- Available surface: polar white, velvety lacquered anthracite

## Berker K.1/K. 5

Profiled, contoured, sleek: the Berker K. 1 and its sister programme, Berker K.5, are perfect examples for straight designs. It gets better: the Berker K. 5 is now also available in fully-anodised aluminium, as well as in its classic stainless steel variant.

## Berker K. 1

- High breaking resistance and long life
- Available in glossy polar white or matt anthracite
- Multiple frames vertical or horizontal for up to five devices

Berker K. 5

- High-quality stainless steel combined with classic design
- Unique combination of clear contours and matt-shiny surface
- New: also available in fully-anodised aluminium (according to E6EV1)

## Hospital installation

## Emergency system

## Emergency call set with frame

Operating voltage $24 \mathrm{~V}=-$ acoustic and visual signalling of an emergency call usOperating temperature $-5 \ldots+40^{\circ} \mathrm{C}$

Set consisting of:

- Pullcord with frame, order no. 5202.
- Pilot lamp with frame, order no. 5203. .
- Shut-off push-button with frame, order no. 5201.
- Power supply with frame, order no. 5204..

For installation in standard wall boxes according to according to DIN 49073-1
The emergency call set is used to call for help in public or disabled WCs, doctors' surgeries and old people's homes. It corresponds to the safety requirements according to DIN VDE 0834

## Call button with frame

Operating voltage $24 \mathrm{~V}=-$ as expansion for the emergency call set
Operating temperature
$-5 \ldots+40^{\circ} \mathrm{C} \quad-$ with quiet lamp
Additional call push-button to, for example, provide a

- with red call button with lens
control section in a second room or an additional location to trigger an emergency call.
For installation in standard wall boxes according to according to DIN 49073-1
- centre plate for plug-in fixing
- with screw terminals

## Berker R.1/R. 3

A brilliant tradition. A global model of success. And a great heritage, that we need to protect and further develop. Around a century after we built the first switch with a circular profile, we now are opening the next chapter. With the switch programmes Berker R. 1 and Berker R.3, which the designer Werner Aisslinger created with Berker, we carry the great tradition of round switches into the future. The Berker R. 1 and Berker R. 3 are the only programmes on the German market to consistently offer round centre plates universally. We offer both in the surfaces plastic, glass, aluminium and stainless steel, as well as a universal variety of functions. Both series reinterpret the tradition of round operating elements in an unmistakeable way.

- The contemporary rediscovery of round switches
- The only switch programmes with fully round centre plates
- High-quality surface material: plastic in polar white/black (glass, aluminium or stainless steel of 3 mm thickness)
- Basic support made of 7 mm -thick plastic

## Berker R. 1

It stands unmistakably in the tradition of great switch programmes. And still, the Berker R. 1 interprets the round radius anew in its own way. With its soft frame contour and a variety of functional versions, the soft round switch is an ideal accompaniment for all residential and furnishing projects.

- Great novelty in the tradition of major switch programmes
- Soft frame contour, wide range of function variants
- High-quality surface material: plastic in polar white/black (glass, aluminium or stainless steel of 3 mm thickness)
- Basic support made of 7 mm -thick plastic
 reddot design award winner 2013

## Berker R. 3

The Berker R. 3 celebrates the power of contrast: we combine circular centre plates with a continuously cornered frame. Superb side-effect: The Berker R. 3 is ideally suited for installation in wall ducts.

- Exciting design (square frame, round centre plates)
- Ideal for installation in wall ducts
- High-quality surface material: plastic in polar white/black (glass, aluminium or stainless steel of 3 mm thickness)
- Basic support made of 7 mm -thick plastic

# Serie 1930 / Glas / Palazzo /R.classic 

Round switch programmes are among the classics of interior furnishing. Berker's round programmes, in turn, have permanently influenced switch design. And so the Berker Glass series today stands for switches that are the epitome of understated elegance. The origins of the Berker Serie 1930, in turn, can be traced back to the 1930s. We make the porcelain variant together with Rosenthal, Germany's most artistic porcelain brand.

## Serie 1930

Berker and Bauhaus are not only the same age (both were founded in 1919), but they also share the same passion for pure shapes and functionality. Even today, clients and planners love both qualities. And, because of this, the unique, Bauhaus-inspired Berker Serie 1930 can be found not only in timeless, classic buildings, but also in trendy properties, such as the "Casa Camper" in Berlin.

## Serie Glas

Simplicity. Attractive shape. Design elegance, produced by the function: all these qualities can be found at their zenith in the Berker Serie Glas, inspired by the styles of the Bauhaus.

- Fits into both older buildings and modern living spaces
- At home in any classical and modern architecture
- Switch foot made of real, clear glass

## Frames

- Due to the diameter of the cover frame, the universal flush-mounted boxes must be placed precisely.

## Serie Palazzo

The exclusivity of any real estate can often only be seen in its fine details. A particularly chic detail is the Berker Palazzo series. With its decorative rings, gilded in 24-carat gold, and find marble or rootwood finish, it is an unmistakeable example of design greatness.

- Ultra-high-grade materials with marble or mahogany root-wood effects, framed in 24-carat real gold-plated decorative rings
- Available surface decorations: white marble, black marble, root-wood mahogany brown

[^8]Plastic inlay Duro-Horn ${ }^{\circledR}$, glossy

## Frames

- Due to the diameter of the cover frame, the universal flush-mounted boxes must be placed precisely.

## Serie R.classic

Can a switch awaken feelings? No switch has probably ever answered this question as emotionally as the Berker R.classic series. With its attractive, round shape, four high-quality material variants and sleek rotary toggle, it guarantees a great feeling: excitement.

- Contemporary development of the Berker Serie 1930
- High-quality surface material: plastic in polar white/black (glass, aluminium or stainless steel of 3 mm thickness)
- Basic support made of 7 mm -thick plastic
- A new feature: frameless switches

## Frames

## Berker B.IQ

A wide array of alternative materials and colours have been added to the convenient variety of KNX functionality of the Berker B.IQ.

- Frameless KNX push-button with full-material rockers (glass, stainless steel and aluminium)
- High scope of functions in the KNX applications through to devices with integrated thermostats
- The attractive appearance is rounded off using white status LEDs and a blue operation LED
- Suitable variants for all materials and colours of sockets in the Berker B. 7 switch range Available materials: plastic and glass in polar white, black and aluminium. Metal variants in aluminium and stainless steel

## Surfaces

- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- With 2 white status LEDs per rocker (labelling field illumination)
- Wth blue operation LED
- For individual single room temperature control
- For heating and/or cooling mode with/without auxiliary step
- Operating modes: comfort, standby, night operation and frost/heat protection adjustable
- LC display with symbols and illumination, switchable via object
- With 2 additional function buttons for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Temperature measurement via internal temperature sensor and/or external communication object (weighting ratio parameterisable)
- Provision of the internal temperature value via communication object
- For installation in single standard wall boxes
- With dismantling protection
- For detailed information, in particular on the software functions, refer to the chapter "KNX operating systems".

# Berker TS/TS Crystal/ TS Crystal Ball 

Behind its elegantly purist exterior, there is an unexpected wealth of technical options: the Berker TS allows operation, not only of multiple light sources, but, if so desired, also of intelligent building control systems, such as Berker KNX or Berker Radio Bus. With their fine platform and switching knobs MADE WITH SWAROVSKI ELEMENTS, the Berker TS Crystal lends refinement to any atmosphere.

- Suitable for installation bus systems and relay circuits with safety extra-low voltage
- Material glass
- Crystalline variation of push-buttons MADE WITH SWAROVSKI ELEMENTS for the glass platform of the Berker TS
- Push-buttons available in 4 colours

## Berker TS Sensor

Understatement is an art, and the Berker TS Sensor makes it perfect. Up to eight functions are concealed under a pure surface that is practically flush with the wall, and can be custom-labelled on request. A single touch is all it takes to control lights, heating or blinds. In this way, the Berker TS Sensor can offer an exciting variety of possibilities - and, at the same time, still seems as calm as possible.

- Suitable for installation bus systems and relay circuits
- Having the electronics directly on the rear side of the glass plate creates enormous switching safety
- Particularly flat construction method permits flush mounting
- Readiness and switching states can be display using LEDs
- Completely smooth surface thanks to screw-free fastening
- Labelling on rear side meaning perfect protection

## Surfaces

glass glossy, printed on the back
polar white similar to RAL 9010
black similar to RAL 9005
aluminium similar to RAL 9006

## Mounting

Glass sensors are snapped in place on a wall box 2 gang using adjustable retaining pins in such a way that the glass sensors are seated almost on the wall. The supplied adapter ring provides anti-dismantling protection and gives the glass plate shadow contours. The adjustable retaining pins can be used to compensate for deviating installation depths or irregularities of the wall of up to 20 mm .

## Connection

The glass sensor is connected to the interfaces of the respective systems via an adapter using a ribbon cable. The separate power supply must be connected to the respective adapter.

## Connection

The glass sensor with room thermostat and the glass sensor comfort are connected directly to the KNX bus and separate power supply using the connecting terminals located on the backside.

## Removal

To pull glass sensors out of the clamp springs of the wall box, use the supplied dismantling aid with suction cups.

## Glass sensors

Glass sensors comfort

- With integral bus coupling unit
- Operation by gently touching the sensor surfaces on the white LEDs
- For switch, push-button, dimmer and shutter functions
- Single and two push-button operation parameterisable
- Retrieval, setting and storing of 8 light scenes
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- Integrated temperature sensor
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- Additional connection for external temperature sensor
- Usable as thermostat extension unit
- Provision of the internal temperature value via communication object
- Blocking function for sensor surface e.g. for cleaning the glass surface
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte
- Bus connection via connecting terminal
- For vertical mounting
- For mounting, always use the flat 2gang wall box, order no. 1871
- With adapter ring for dismantling protection, shadow jointing and special installation conditions
- With disassembly suction tool
- For individually labelled glass and touch sensors (configured variations), the new Web Configurator generates a layout number, which must be additionally specified when placing the order.
- Many options for labelling (text and/or icons) will be available from August 2013 via the new web configurator at www.berker.com

- For switch, push-button, dimmer, blind and thermostat functions
- Single and two push-button operation parameterisable
- Retrieval, setting and storing of 8 light scenes
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- For heating and/or cooling mode with/without auxiliary step
- Controller operating modes: comfort, standby, night and frost/heat protection mode
- LED display with symbol display
- With 2 additional sensor surfaces for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Integrated temperature sensor
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- Additional connection for external temperature sensor
- Usable as thermostat extension unit
- Temperature control via local measurement or measured value via object
- Blocking function for sensor surface e.g. for cleaning the glass surface
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte
- Separate auxiliary power supply needed
- Operation with non-choked output of KNX voltage supply possible (pay attention to current consumption)
- Bus connection via connecting terminal
- For vertical mounting
- For mounting, always use the flat 2gang wall box, order no. 1871
- With adapter ring for dismantling protection and shadow gap formation
- With disassembly suction tool
- For individually labelled glass and touch sensors (configured variations), the new Web Configurator generates a layout number, which must be additionally specified when placing the order.
- Many options for labelling (text and/or icons) will be available from August 2013 via the new web configurator at www.berker.com

## Berker Integro Flow

Especially in small areas, the perfect integration of a switch is essential. The Berker Integro Flow is a particularly successful example of this. With its vaulted surface, it fits perfectly into any environment - and does a wonderful job, even in the smallest of areas.

- Ultra-compact design - particularly suitable for use in mobile homes, kitchen furnishings, electrical appliances or for furniture construction and the field of sanitation
- Also fulfils special requirements, for example in boot construction and in laboratories
- Modular product concept
- Individual customer desires relative to colours, imprints, and materials can be implemented

Momentary-contact current
Neon lamp current
When several neon lamp units are used, the lamp current may result in malfunctioning of the relay/pulse relay. Remedy: Carry along a neutral conductor or connect a capacitor 230 V ( $1 \mu \mathrm{~F}$ per 10 mA neon lamp current) in parallel with the coil.

Installation instructions IP44 for Berker Integro Flow

## 

More and more people are following the trend of not following a trend. for these people, there is Berker Manufacture.

This is where we create switches that are a real blend of hi-tech and handicraft, that are utterly unique. We often design items together with architects and planners for a very particular property or for a special project. Some have their source in the very special wishes of a property owner who is looking for somethingwhich they can simply not find available on the market.

It's a source of pride to us that we can make these wishes a reality. What matters is individuality, so almost every product is one of a kind. And therefore as individual as the environment for which it has been made.
Real one-offs, made to measure ..... 582
Custom switches for unique buildings ..... 583
Maximise your possibilities ..... 584
Individual push-button ..... 585

Berker was founded in 1919 as a „Specialised factory for Electrotechnical Devices".

## Flush-mounted wet-room installation

Even in places where things can get damp or wet, it's still not necessary to forget about aesthetics: some rockers, centre plates and sockets from the Berker Q.1/Q.3, K.1/K.5, Arsys and R.1/R. 3 switch programmes can be installed so that they are water-proof. Sole condition: the seal must be installed full-face.

- Frames and covers to match the inserts for standard and comfort ranges (not including key switches)
- Sealing sets available for selected standard and comfort ranges Important: note that there are different sealing sets for switches/push-buttons, socket outlets/centre plates and key switches/key push-buttons

Full-face sealing is essential.

Installation instructions for flush-mounted splash protected IP44

Installation instructions for Berker ARSYS IP44

Installation instructions for Berker Q.1/Q. 3 and K.1/K. 5

Sealing set Q.1/Q.3, K.1/K. 5 for switch/push-button (packing unit)

Application
IP44 protection is reached by using the sealing set and installing

- in flush-mounted wall box according to DIN 49073 part 1
- on smooth, even, vertically walls
- in finery-concisely inserted flush mounted wall boxes

IP44 protection is not guaranteed for floor assembly, ceiling mounting and assembly in hollow wall boxes.

Attention!
IP44 protection is reached only if all installed articles are IP44 suitable (check markings) and the installation instruction is observed!

Installation instructions for Berker R.1/R. 3

## Application

## BLC controllers

656 Marked items are only suitable for splash-protected IP44 flush-mounted installation when used in conjunction with the corresponding sealing accessories.

BLC controller comfort 1.1 m IP44

Nominal mounting height
Delay time, adjustable immunity time
Time to dim down
$\approx 10 \mathrm{~s} . . .30 \mathrm{~min}$
$\approx 3 \mathrm{~s}$

Short time mode
30 s

Range, frontal
Range, side
Detection field, semi-oval shaped
Detection angle
Response sensitivity, settable
Response brightness, adjustable $\approx 0 \ldots 80 \mathrm{~lx}, \infty \mathrm{~lx}$ (day)
Operating temperature $-20 \ldots+45^{\circ} \mathrm{C}$
Dimensions assembling height 23.5 mm
Continuous direct sunlight penetrating the upward-pointing detection plane can result in failure of the controller. Only suitable for indoor areas!
In conjunction with a BLC relay insert HVAC, the HVAC channel is also switched on for the duration of its delay time, independent of the response brightness.
Switches on for the duration of the controller delay time when the minimum response brightness level is infringed and if people are detected.

each $\approx 3 \mathrm{~m}$
$-20 \ldots+45^{\circ} \mathrm{C}$
23.5 mm

Suitable fo
BLC Inserts
with adaptive sensitivity adjustment

- with dimming function (soft-off) when using BLC dimmer inserts
- glare-proof, e.g. against a torch
- $\mu$-processor controlled operation (detection signal evaluation and interference signal suppression)
- switch-on brightness in conjunction with BLC dimmer inserts can only be saved via BLC extension unit
- no switch-on in case of inadvertent brief shadowing
- activation by push-button, NC contact in the line
- step operation with immunity time (e.g. for bell)
- with cover to limit detection angle to $90^{\circ}$
- with teach function for response brightness

## Surface-mounted wet-room installation

For surface mounting, our Aquatec range, or the extremely sturdy, waterproof ISO Panzer mean that everything is home and dry.

- Spacious housing for easy installation
- Housing, rockers and hinged covers in impact-resistant thermoplastic material in light grey/grey and black/yellow
- Housing material highly resistant to chemicals
- Screws and hinged cover springs made of stainless steel/hinged cover axles made of non-corrosive brass
- Large control surfaces

Neon lamp unit for switches/push-buttons
Operating voltage 250 V~

Rated current
When several neon lamp units are used, the lamp current may result in malfunctioning of the relay/pulse relay. Remedy: Carry along a neutral conductor or connect a capacitor 230 V ( $1 \mu \mathrm{~F}$ per 10 mA neon lamp current) in parallel with the coil.

## Radio bus operating systems

Anyone wanting to renovate their property and make it more comfortable does not always need to get to grips with drills and crowbars. The operating systems and devices of our radio bus system work with battery-operated switchable consumers and can be mounted easily without major installation work. They can be used to control blinds and lights easily from any consumer in the building. Really neat!

- Installation in places where conventional installation would not allow mounting of a switch
- Retrofit installation of convenience functions - simply and inexpensively
- Hand-held radio transmitter for further convenience functions such as centralised operation of all lights in the house and garden, simultaneous activation of lights and blinds in light scenes, or central switching-off of all electrical consumers upon leaving the house
- Radio buttons, transmitters and push-buttons available in the standard and surface range designs

# Radio bus transmitters and actuators 

The Berker radio bus system offers maximum flexibility, because you can install each radio bus component in just the place where it is wanted. The radio transmitters communicated with the taught-in radio actuators via digitally structured telegrams. Whether via a permanently installed radio transmitter in the wall or a portable radio hand-held transmitter - each transmitter can address the functions of different actuators and trigger switching, dimming or blind commands.

## KNX-Radio

The new electronics platform consists, on the one hand, of conventional solutions and on the other hand, this platform can be expanded further using the radio applications shown here. In this way, for example, a flush-mounted dimmer can be turned into a remote control solution by attaching a radio button. The special feature is that both the radio application modules and all the flush-mounted radio devices use the KNX radio standard. This means that a tried-and-trusted and secure radio technology is used, which allows many different types of commissioning. The radio transmitters and receivers of the new electronics platform can be taught in easily using buttons and LEDs - as it were, at the touch of a button (quicklink). This simple type of commissioning is particularly suited to small and medium-sized systems, in which the applications communicate with each other solely by means of radio. ETS applications, which are loaded into the KNX radio/TP Gateway AP, are available for including the radio products.

Note: the products are not compatible with the radio bus system!

## KNX operating systems

There are devices which want to show everyone, all the time, what they can do. And there are those all-rounders, who hide their technical perfection and spacious insert width behind a discreet surface. These include our KNX control sections, which can be integrated easily into our switch range using simply their design or using a frame.

## Berker S.1/B.3/B.7, Modul 2, Arsys - push-buttons

- For switch, push-button, dimmer and shutter functions
- Extension unit for light scene push-button
- With dismantling protection

## Push-button 1gang comfort

- Labelling field
- Vertical operation

Operating temperature

- single and two push-button operation parameterisable
- one push-button operation for switching, pushing, shutters and dimming
- activation of second user level via object
- with green operation LED and 2 red status LEDs
- alarm telegram after disconnection from bus coupling unit 1 bit or 1 byte
- cyclic transmission can also be started via switching object
- value transmitter for dimming, position, brightness and temperature values 1 and 2 byte

## Berker Q.1/Q. 3 - push-buttons with thermostat and bus coupling unit

- For switch, push-button, dimmer, blind and thermostat functions
- Single and two push-button operation parameterisable
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- For retrieval, saving and setting of 8 light scenes
- For individual single room temperature control
- For heating and/or cooling mode with/without auxiliary step
- Controller operating modes: comfort, standby, night and frost/heat protection mode
- LC display with symbol display
- With 2 additional function buttons for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- With room temperature timer
- For installation in single standard wall boxes
- For continuous (PI) or switched (2-point) control of max. 2 control circuits
- With dismantling protection
- With button blocking function
- End customer display scope parameterisable
- Separate object for window contact
- Programmable from ETS2, V1.2a
- Alarm telegram after disconnection from bus coupling unit 1 bit or 1 byte
- Presence button parameterisable to extend comfort
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte

## Touch sensors with thermostat

- With integral bus coupling unit
- Operation by gently touching the sensor surfaces on the white LEDs
- For switch, push-button, dimmer, blind and thermostat functions
- Single and two push-button operation parameterisable
- One push-button operation for switching, buttons, blinds and dimming
- For individual single room temperature control
- For heating and/or cooling mode with/without auxiliary step
- Operating modes: comfort, standby, night operation and frost/heat protection adjustable
- LED display with symbol display
- With 2 additional sensor surfaces for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Integrated temperature sensor
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- Additional connection for external temperature sensor
- Provision of the internal temperature value via communication object
- Temperature control via local measurement or measured value via object
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte
- Separate auxiliary power supply needed
- Operation with non-choked output of KNX voltage supply possible (pay attention to current consumption)
- Bus connection via connecting terminal
- For mounting on a double box, e.g. order no. 1809 (flush mounting) or 1824 (hollow wall mounting)
- For vertical mounting
- With dismantling protection via a screw on the fastening ring
- For individually labelled glass and touch sensors (configured variations), the new Web Configurator generates a layout number, which must be additionally specified when placing the order.

## Push-buttons with thermostat

- For switch, push-button, dimmer, blind and thermostat functions
- Single and two push-button operation parameterisable
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- With 2 white status LEDs per rocker (labelling field illumination)
- Wth blue operation LED
- For individual single room temperature control
- For heating and/or cooling mode with/without auxiliary step
- Controller operating modes: comfort, standby, night and frost/heat protection mode
- With 2 additional function buttons for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Temperature measurement via internal temperature sensor and/or external communication object (weighting ratio parameterisable)
- Provision of the internal temperature value via communication object
- With room temperature timer and 2-week timer functions
- Button help function can be activated
- For installation in single standard wall boxes
- For continuous (PI) or switched (2-point) control of max. 2 control circuits
- With dismantling protection
- Text display (ASCII-format)
- LC display with symbols and illumination switchable via object
- With button blocking function
- End customer display scope parameterisable
- Separate object for window contact
- Programmable from ETS2, V1.2a
- Alarm telegram after disconnection from bus coupling unit 1 bit, 1 or 2 byte
- Presence button parameterisable to extend comfort
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte

## Flush-mounted bus coupling unit for B.IQ with

thermostat

Operating voltage over bus
Operating temperature
Insertion depth

21 ... $32 \mathrm{~V}=$ $-5 \ldots+45^{\circ} \mathrm{C}$ 20 mm
for B.IQ push-buttons with thermostat and display or Bluetooth gateways

- with programming button and red programming LED
- bus connection via connecting terminal
- without spreader claws

## Berker TS Sensor

- For individually labelled glass and touch sensors (configured variations), the new Web Configurator generates a layout number, which must be additionally specified when placing the order.
- Many options for labelling (text and/or icons) will be available from August 2013 via the new web configurator at www.berker.com

## Glass sensors comfort

- With integral bus coupling unit
- Operation by gently touching the sensor surfaces on the white LEDs
- For switch, push-button, dimmer and shutter functions
- Single and two push-button operation parameterisable
- Retrieval, setting and storing of 8 light scenes
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- Integrated temperature sensor
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- Additional connection for external temperature sensor
- Usable as thermostat extension unit
- Provision of the internal temperature value via communication object
- Blocking function for sensor surface e.g. for cleaning the glass surface
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte
- Bus connection via connecting terminal
- For vertical mounting
- For mounting, always use the flat 2gang wall box, order no. 1871
- With adapter ring for dismantling protection, shadow jointing and special installation conditions
- With disassembly suction tool

Glass sensors with thermostat

- With integral bus coupling unit
- Operation by gently touching the sensor surfaces on the white LEDs
- For switch, push-button, dimmer and shutter functions
- Single and two push-button operation parameterisable
- Retrieval, setting and storing of 8 light scenes
- One push-button operation for switching, buttons, blinds and dimming
- Extension unit for light scene push-button
- For heating and/or cooling mode with/without auxiliary step
- Controller operating modes: comfort, standby, night and frost/heat protection mode
- LED display with symbol display
- With 2 additional sensor surfaces for display control
- Display of operating mode, controller lockout, room and outside temperature as well as time in connection with a clock
- Integrated temperature sensor
- Temperature measurement via internal and/or external temperature sensor with mean value formation
- Additional connection for external temperature sensor
- Usable as thermostat extension unit
- Temperature control via local measurement or measured value via object
- Blocking function for sensor surface e.g. for cleaning the glass surface
- Value transmitter for dimming, position, brightness and temperature values 1 and 2 byte
- Separate auxiliary power supply needed
- Operation with non-choked output of KNX voltage supply possible (pay attention to current consumption)
- Bus connection via connecting terminal
- For vertical mounting
- For mounting, always use the flat 2gang wall box, order no. 1871
- With adapter ring for dismantling protection and shadow gap formation
- With disassembly suction tool

- freely-programmable indication and operating pane with TFT touch display
- 50 dialog pages each with up to 16 parameterisable display elements (max. 400)
- display elements suitable for invoking predefined or freely-configurable functions
- calling up dialog pages about KNX object
- background bitmaps insertable (e.g. ground plans)
- linking of dialogue pages possible
- functions e.g. switching, dimming, blinds, light scenes, heating, operating modes, date, time
- functions e.g. access control, positive operation, value transmitter, value display with/without limit values
- intelligent functions e.g. time links, logic functions, multiplexes parameterisable
- display lighting, duration and type of activation and brightness adjustable in 2 stages
- indication of up to 8 RSS news feeds
- data logger for recording, evaluation and representation of measuring points as diagram
- freely-selectable national language (code page) per indication page
- 50 error messages, can be parameterised
- indication of the last 20 error messages via message window, audible warning
- text display (ASCII-format)
- retrieval of e-mails
- transmission of predefined e-mails
- with synchronisable integral real-time clock with date
- time switch (weekly) with 16 channels each with 8 switching times
- presence simulation with recording and reproduction type daily sequences
- astro programme for functions during sunrise/sunset
- retrieval, adjustment and storage of 24 light scenes with up to 32 outputs
- integrated alarm system for monitoring of windows, doors and interiors
- 4 password levels for differentiated access authorization parametrizable
- integral piezo buzzer
- remote operation via PC possible
- programmable via USB interface or network
- RJ45 Port for LAN connection
- bus connection via connecting terminal
- with screw terminals

domovea

## domovea server incl. software

Operating voltage over bus
Auxiliary voltage
Current consumption (operation)
Power consumption (operation)
RAM
Graphics memory
Processor
Operating temperature
Width of rail mounted device (RMD)
Central operating and visualisation unit for KNX installations via client software.
Knowledge of the relevant network technology is required for installation.

System requirements: Windows XP, VISTA and Windows 7 (32 or 64-bit).

## domovea software server with USB/KNX interface

Operating voltage interface via bus 21 ... $32 \mathrm{~V}=$ 128 MB
RAM min. $1024 \times 768 \mathrm{px}$
Graphics resolution min. 500 MB
Free hard disk space
Central operating and visualisation software for operation via client software.
Knowledge of the relevant network technology is required for installation.

System requirements: Windows XP, VISTA and Windows 7 (32 or 64-bit).

- user interface can be configured individually for each room with special background images
- creation of max. 50 sequences from different actions
- for control and visualisation of e.g.shutters, lights, heating, ventilation, alarm system, sensors
- KNX server to supply up to 30 visualisation clients simultaneously with KNX data
- creation of light scenes
- creation of measured value archives and energy consumption visualisation with KNX energy meters
- configuration tool for installation of IP settings and parameterisations
- with configuration and client software on USB stick
- managing up to 30 users with different access rights
- integration of max. 10 network cameras
- processor min. 600 MHz
- with USB interface for connecting to the bus
- with connecting cable

0 ... 95 \%

- single-surface operation in conjunction with suitable receiver
- for the transmission of switching, dimming or blind commands to the radio receiver of the EnOcean system
- each channel can be assigned to any number of radio receivers
- provision of transmission energy through conversion of the mechanical energy on button actuation
- with fitting material
- battery-less, maintenance-free device without external power supply
- mounting with frames on even surface, e.g. also for extension of combinations
- screw fastening via supporting plate possible
- for screw or adhesive fixing

| Suitable for optional | Order no. | Page |

## KNX sensors and actuators

With KNX, a house provides a significant contribution to looking after itself: motion detectors activate lighting as necessary. Windows and doors left open by accident are signalled using magnetic contacts and can be closed automatically. In addition, when the windows are open, the heating system reduces output. Using the Berker KNX bus system, your house can learn to adapt to changed environmental conditions. Actuators are selected according to the resources they are to switch or control. This allows e.g. switchable lamps, socket outlets or fixed-location consumers to be operated with switch actuators. The Berker KNX System so contains a special actuator type for each application.

## KNX system units

The system components are KNX devices, which assume higher-level functions, independent of the application. They guarantee the necessary infrastructure in the building, ensuring a flawless information exchange between sensors and actuators. In addition, the system devices stand for the highest quality and functional safety in the system.

## Radio receiver surface-mounted

Operating voltage over bus
Radio reception frequency
Number of function channels
Number of teachable radio transmit-
ters
Operating temperature
Dimensions (W x H x D)
A 9 V block battery is required for teach-in of radio transmitters, e.g. order no. 9209.
The surface-mounted radio receiver converts signals of taught-in radio bus transmitters into KNX telegrams.
For matching hand-held radio transmitters, see radio bus.
21... $32 \mathrm{~V}=$ - for switch, push-button, dimmer and shutter functions
433.42 MHz - processing of the radio signals of hand-held, wall-
mounted and flush-mounted radio transmitters and radio controllers

- with 2-digit, 7-segment function channel display
- with green operation LED and red programming LED
- extension unit for light scene push-button
- with acknowledgement button
- with programming button and function channel selection button
- bus connection via connecting terminal
- dimming / position value transmitter 1 byte
- with fitting material
- with screw terminals

$\approx 1.5 \mathrm{~kg}$
You can find information on the available training courses in the chapter KNX, training.

To prevent malfunctions, we recommend that only Berker KNX products are used in connection with the alarm central unit KNX.

- control TWG robbery, break-in, fire, malfunction, live/ safe potential-free contacts/KNX
- alarm duration and delay times activated/alarm adjustable
- decentral indication and operation, e.g. info display
- detector descriptions can be defined as required
- with green operation LED and red programming LED
- with control LED per output
- with integral clock (DCF-compatible using system clock)
- sensor inputs via binary inputs or universal interfaces
- cyclic sensor monitoring
- outputs for outside/inside siren and flash light or connection to KNX via actuator
- with sabotage protection by contact in cover
- additional signal input as sabotage protection for mounting place
- alarm zones can be activated individually or linked
- for maximum 160 sensors (communication objects) and 4 alarm zones
- history memory with individual sensor identification
- requirement: ETS2 V1.2a or ETS3
- with fitting material
- bus connection via connecting terminal
- with screw terminals
- with emergency power storage battery 12 V for maximum 12 hours

## Security and safety systems

With innovative technology and restrained design that integrates virtually unnoticed into the living environment, Berker's security and safety systems provide reliable protection - for both the material and the less tangible things in your customer's life. These systems ensure reliable protection against break-ins, theft, vandalism and fire. Conventionally-wired alarm systems offer particularly economical monitoring for smaller properties such as owner-occupied flats, whole-floor flats, holiday homes etc. A very high-performance alarm system for integration into the intelligent instabus KNX building management systems, offering optimal protection of monitored properties.

Tool sizes for BERKER products with combination cross-head slotted screws as fixings.

- Cross-head bits,

Type: Pozidriv®size 1.
Cross-head screwdriver:
Type: Pozidriv®size 1.

- Slotted screwdriver:

Type: blade thickness 0.8 mm .

Contact screws:
Cross-head bits,
Type: Pozidriv®size 2.
Cross-head screwdriver:
Type: Pozidriv®size 2.
Slotted screwdriver:
Type: blade thickness 1 mm .
When using cordless screwdrivers,
setting 1st gear, speed 1 at 0.5 Nm .

The neon lamp unit can be inserted from the front and replaced without removing the switch.

## Switch-off

Monitoring
with change-over switch
(Neon lamp unit lit when "On")
\. Remove detachable contact
lug from neon lamp unit

S.1/B.1/B.3/B. 7 rocker with red lens for illuminated switches or monitoring switches.

Neon and glow lamp units are available for light switches/push-buttons of programmes S.1/B.1/B.3/B.7, Modul 2, Q.1, Q.3, R.1, R.3, Arsys, K.1, K.5, splash-protected flush-mounted IP44, Aquatec and ISO Panzer.
Illuminated light switches not only offer effective guidance. Used as monitoring switches, they indicate active consumers. Not least, they help conserve energy and maintain security.

## Workplace Regulations

The German Workplace Regulations ("ArbStattV") stipulate that existing installations must also be converted to illuminated light switches. With installation switches from the BERKER range there is no problem in this respect, as the neon lamp units are easily retrofitted and ensure the same illumination effect. In the case of splash-protected surface-mounted units the illumination cannot always be upgraded!

Monitoring and indicator lamps such as neon units and neon lamps wired in parallel with the switching contact lead to the contact opening distance not being reached.

## Control switching for series switches

For series light switches in the ranges S.1/B.1/B.3/B.7, Modul 2, K.1, K. 5 and Arsys, the series LED unit with N -terminal is available.
Used as a control switch, it shows the loads switched on for each series. Some important uses of this are safety and monitoring energy consumption.

## Control series switch

N-terminal

Contact springs for easy snap-in mounting.

Snap on series LED unit from the rear.

Max. numbers of fluorescent lamps that can be switched.

| Switching capacity with 10 AX switches | 40 W | 65 W |
| :--- | :---: | :---: | :--- | :--- |

## 2pole on/off 16 AX

 2pole on/off 10 AX

Switch-off permanently illuminated

Switch-off 2pole Permanently lit (Neon lamp unit e.g. 675 permanently lit)

## 3pole on/off

## Pullcord switch

> and wid

Phtact liuminated hthifumination, only a limited unber of switches can be wired in paralle, unless the neutral
conductor is brought through.

Pullcord switch change-over contac Monitoring
! Remove detachable contact lug from ! neon lamp unit.
 $!$ Remove detachable contact lug
Pullcord switch chang amp unit. Monitoring with separate signalling contacts

## Push-button/light signal E10

3-step switch

Push-button (NOC) illuminated When using neon lamp units, only a limited number of switches can be wired in parallel.

Push-button (NOC) monitoring

Push-button (NOC) separate signalling contacts e.g. for indicator lamp connection.

3-step switch with 0-position

3-step switch without 0-position

Blind series switch/push-button

Group series push-button as shutter blind push- buttons

Group series push-button with 4 NO contacts as double blind push-button

Blind switch for centre plate with lock/ push-button for lock cylinder

 (2pole) for lock cylinder

Change-over switch (2pole) for lock cylinder

Change-over switch (2pole) for lock cylinder

Profile half cylinder

The NOC for the profile half cylinder can be adjusted by pressing in the pin on the side in $45^{\circ}$ steps.
At key bit position $315^{\circ}$ the key bit is guided in the engaging fork of the switch. The cover is not locked and the key can only be removed in the zero position (unswitched)

At locking steps $90^{\circ}, 135^{\circ}$ and $225^{\circ}$ the key bit is introduced adjacent to the engaging fork of the switch. After actuation, the key is turned back to the starting position and so can be withdrawn with the switches in any switch setting. The cover is then locked and the switch cannot be dismantled without inserting the key.

Hotel Card switches/Socket outlets/
Loudspeaker inserts/Operating conditions

## Hotel card switches

The hotel card switch provides efficient energy use and a means of storing the hotel card in hotels or other locations, such as at the workplace. When the hotel card is withdrawn, power is cut to all the electrical consumers which are still in operation but no longer required, such as the lights (possibly with a delayed-off relay) and wall socket circuits (e.g. for TV etc.). For this, a load contactor is activated via the hotel card switch. When the hotel card is inserted, the contact is closed and the in-series load contactor switches the connected electrical consumers on

Loudspeaker inserts

\} Operating conditions for electronic switches, dimmers and speed controllers
Rated load capacity when installed as single unit subject to:

- Ambient temperatures up to $25^{\circ} \mathrm{C}$
- Installation in solid stone wall
- The rated load of the Tronic transformer is always taken as the basis, not only the connected bulbs.

Differing conditions:

- minus $10 \%$ per $5^{\circ} \mathrm{C}$ above $25^{\circ} \mathrm{C}$
- minus 15 \% in wood or chipboard walls
- minus $10 \%$ external units in multiple combinations
- minus $20 \%$ internal units in multiple combinations

## Timer Comfor

The timer permits programmed, timed switching of loads up to 1000 W/VA. It is also possible to switch the lighting depending on brightness using a twiligh sensor. With the astronomical function adjustable by $\pm 1$ hour 59 minutes, the switch-on and switch-off times can be adjusted to the sunrise and sunset times for the specific location. With the timer function the lighting is switched on for a preset time between 1 minute and 23 hrs and 59 min . By way of the extension unit inputs, a series push-button with 2 NOC (normally open) contacts can be used to switch on or off manually. Manual operation has priority at all times.

## Astronomical function

By activating the astro programme the switch-on times that occur within the period of daylight are not executed until sunset. Preset switch-on times after sunset are retained. Switch-off times which occur after sunrise are executed as soon as sunrise occurs. Preset switch-off times after sunrise are retained. The adjacent drawing shows the astronomic curve from week number 12 to week number 40 , incorporating a +1 hour adjustment for summer time (user must switch between winter and summer time).

Twilight function (only with mounting with sensor connection):
The twilight function is activated approximately 90 minutes before sunset (see astronomic curve). Approximately 4 minutes after the brightness has fallen below the preset level, the lighting is switched on

## Features:

- Operation via 4-button control pad
- 2 independent programme memories for a total of 18 switching times (e.g. 9 switch-on and 9 switch-off times)
- Timer function (countdown function)
- Random function
- Astronomic function with individual adjustment facility $\pm 1$ hour 59 minutes
- Adjustable twilight sensor
- Summer/winter time
- Operation of on/off extension unit inputs by rocker button with 2 NOCs

For intermediate and changeover switch circuits

- Reset to factory default possible
- Power reserve up to 24 hours (maintenance-free without batteries)
- Manual operation possible at any time

| Radio interference suppression | to EN 55015 |
| Operating temperature | 5 to $35^{\circ} \mathrm{C}$ |
| Index of protection | IP20 |

## Energy saving by dimming

Controlling the brightness levels of lights not only provides a pleasant ambience, it also prolongs the lives of the bulbs. In the low-voltage halogen field in particular, the compact dimensions of the bulbs can provide special design benefits for lighting which are further enhanced by dimming.
A further important aspect is energy saving, because in dimming mode much less power is drawn from the system and the lives of the bulbs are also greatly prolonged (see diagram). This can save a great deal of money.

## Bulb life depending on voltage

5 \% lower voltage corresponds to 200 \% life

Universal dimmers teach themselves the load type during commissioning and automatically set the correct dimming principle.

A distinction is made between two dimming principles:

- Phase cut-on dimmer for brightness control of:

Incandescent lamps, 230 V halogen lamps and 12 V halogen lamps with conventional transformer

At the beginning of each half-wave the dimmer blocks the current flow to the lamp, it is non-conducting. Only at the end of the time set by the user does the dimmer cut in again, and current is re-applied to the connected lamps. At the next sine zero, the dimmer again blocks the current flow. This process is repeated with each sine half-wave - that is, 100 times per second ( 50 Hz ). During the time in which the dimmer blocks the current, no power is drawn from the mains or metered.

Phase cut-off dimmer for brightness control of:
Low-voltage halogen lamps with Tronic transformers, incandescent and halogen lamps.

The Tronic dimmer is activated when the sine half-wave passes through zero and deactivated again after the time set by the operator. At the next sine wave zero the Tronic dimmer releases the current flow again. This process is repeated with each sine half-wave - that is, 100 times per second ( 50 Hz ). In the time during which the Tronic dimmer blocks the current, no power is drawn from the system, and none is metered

## Dimmer selection table

| Dimmer type: <br> Load type: | Standard phase cut-on dimmers | Low voltage phase cut-on dimmers | Phase cut-off dimmers | Universal dimmer | Speed controllers $\square$ |

## Product features BLC controller 1783 xx / 1786 xx

- For mounting on BLC inserts
- Optimised detection thanks to refined lens system
- Detection angle $180^{\circ}$
- Scope of delivery includes cover for limiting the detection area to $90^{\circ}$
- Analogue signal processing
- Response brightness adjustable in the range from 0 to 80 lux / daytime operation
- Response sensitivity continuously adjustable from 20 to $100 \%$ via potentiometer
- Standardisation by means of specified delay time ( 2 min .)
- Extension of the detection area, e.g. for long corridors, through active BLC extension units for motion detector 2908 with BLC controllers 1783 ../1786 ../ 1788../, BLC controllers comfort 1784 ../1787 ../1789 .. and BLC presence detector 170109
- Switching on, even outside of the detection area, through the use of passive BLC extension units 2907 or push-buttons (NOCs)
- Also motion-dependent, brightness-independent, time-delayed switching of fans, heaters, etc. through use with BLC relay insert HVAC 2912
- Operating temperature range -20 to $45^{\circ} \mathrm{C}$
- Splash-protected flush-mounted variants (IP44) available

## Product features BLC controller comfort 1784 xx / 17887 xx

- For mounting on BLC inserts
- Optimised detection thanks to refined lens system
- Detection angle $180^{\circ}$
- Scope of delivery includes cover for limiting the detection area to $90^{\circ}$
- Digital signal processing
- Adaptive automatic sensitivity adjustment to process the effects of interference signal sources and for adaptation to the ambient conditions
--> optimised wrong operation safety
--> enhanced switching accuracy for detecting persons
- Response sensitivity also manually continuously adjustable from 20 to $100 \%$ on potentiometer
- Response brightness adjustable in the range from 0 to 80 lux / daytime operation
- Teach function as an additional easy way to individually adjust the response brightness (without detaching the cover)
- Glareproof against brief light from, for example, car headlamps/torches
- No switching-on in case of unforeseeable short shadows
- Slide switch for off/automatic/on
- Brightness-independent step operation with immunity time 3 sec . (only in connection with BLC switch inserts, e.g. for doorbell operation)
- Dimming function (soft-off 30 sec .) when using a BLC dimmer insert
- Setting the switch-on brightness for the lighting via BLC extension unit 2907 in the BLC main dimming device (memory function)
- Extension of the detection area, e.g. for long corridors, through active controller BLC extension units for motion detector 2908 with BLC controllers 1783 ../1786 ../1788 .. BLC controller comfort 1784 ../1787 ../1789 .. and BLC presence detector 170109
- Switching on, even outside of the detection area, through the use of passive BLC extension units 2907 or push-buttons (NOCs)
- Also motion-dependent, brightness-independent, time-delayed switching of fans, heaters, etc. through use of the BLC relay insert HVAC 2912
- Operating temperature range - 20 to $45^{\circ} \mathrm{C}$
- Splash-protected flush-mounted variants (IP44) available

## Teach function

The teaching function can be used to save the current ambient brightness (response brightness). The response brightness set on the potentiometer is then no longer evaluated. Procedure:

- To activate the teaching function, cover up the BLC controller comfort completely briefly for approx. 1 sec.at least 3 times within a period of 9 sec.
- As soon as the BLC controller comfort 3 has recognised 3 light cycles, the teaching function will be active. For confirmation, if the lighting is already switched on it is then switched off and then switched on for 3 sec . If the lighting is already switched off, then it is switched on for 3 sec .
During the next minute, move away from the BLC controller comfort, so that it can correctly measure and save the current ambient brightness.
To confirm that it has been saved, switch the lighting on for 3 sec.
- The BLC controller comfort switches to the operating mode set on the slide switch. A power failure $>2 \mathrm{sec}$. reactivates the response brightness set on the potentiometer.

Possible combinations

## Installation instructions

optimal
The detection rays are intersected optimally.

## 4.

not optimal
The detection rays are not intersected optimally.
Range is limited.

## 4

wrong
The detection rays are not intersected.
The controller detects the object too late.

## 1

## problematical

There should be no sources of interference, e.g. lamps, heaters or fans in the detection field:
Select suitable installation location and/or use push-on cover.

Problems with sources of interference with the BLC controller can generally be solved with the teachable digital BLC controller comfort.
The BLC controllers have no forced switch-off, i.e. constant motion in the detection area results in continuous light. The Controller Berker Control $220^{\circ}$ surface-mounted and the controller system have an integrated forced switch-off after 90 min . at the latest.

## Extension units

When using BLC controllers with BLC extension units for motion detector, overlapping of the detection areas should be ensured, so that detection can be guaranteed.

Dimensions
Very low assembling height in comparison

## BLC controller 2.2 m [order no. 1788 ..] and BLC IR controller comfort 2.2 m [order no. 1789 ..]

If thermal motions triggered by persons, animals or objects are registered in the detection area, the BLC motion detectors switch on connected consumers (passive infrared principle). If motions are no longer detected, they switch off again automatically after the delay time expires.
The BLC controllers are operated together with a BLC switching or dimming insert.

The detection area can be extended in combination with the BLC motion detector extension [order no. 2908].

## Product features

- Crawl-under protection
- Digital signal processing
- Teach function for response brightness
- Delay time limit: 90 min
- Brightness threshold value can be stored safe after power failure
- Switch-on brightness with BLC inserts are storable via BLC extension unit [2907]
- Switch on by using push-buttons (NO contact), passive BLC extension units or push-buttons (NC contact) in the cable
- Motion-dependent, brightness-dependent and time-delayed switching of ventilators, heating systems etc. when using BLC relay switch inserts HLK [ 2912]

Additional product features BLC IR-controller comfort 2.2 m [order no. 1789 ..]

- 2 push-buttons for permanent ON, permanent OFF and automatic
- 2 LEDs for detection, IR receipt and IR confirmation
- With hand-held transmitter for BLC IR controller [2770] additional functions such as selective deactivation to limit detection angle or storable switch-on brightness, possible
- Adaptive sensitivity adjustment
- For use with dimming inserts: Dimming function (Soft Off)
- Step operation with immunity time (e.g. for bell)
- Night light function: without motion the load is dimmed to $20 \%$
- Presence simulation and test mode

## Teach function

i
For wiring diagram see page T15.
The current ambient brightness is stored as brightness threshold value with the teach function.

- Cover the BLC controller 2.2 m completely within 9 seconds $3 \times 1 \mathrm{~s}$ each time.

The lighting is switched on for approx. $1 \mathrm{~s}^{\star}$. Teach function is active.

- Leave the detection area of the controller for approx. 30 s .

The ambient brightness is measured by the device. The lighting is then switched on for approx. 3 seconds.* The brightness threshold value is stored.
*Switched on lighting is switched off.

## Hand-held transmitter for BLC IR controller [order no. 2770]

The IR hand-held transmitter is required for the individual configuration of the BLC IR controller 2.2 m comfort in order to perform remote settings and to use additional functions of the device.

Fig. 1: Overview of function keys

Control overview
Button Function
Permanent $\mathrm{On}^{2}$ or dim brighter
Short press of push-button: Load is switched on constantly.
Long press of push-button: Load is dimmed up brighter
Display on the motion detector: yellow LED lights up

- Not adjustable in step operation.

## Automatic mode

Load is switched on brightness-dependent when motion is detected. If no motion is detected anymore, the motion detector switches off the load after the delay time expires. Delay time limit: 90 min
AUTO push-button switches the following functions off:

- On for 2 hours
- Off for 2 hours
- Permanent On
- Permanent Off
- Presence simulation
- Test modeDate is recorded continuously in automatic mode (chronological sequence of switch-on and switch-off operations) for the presence simulation.

Short press of push-button: The load is switched off permanently (with dimmer inserts after dimming phase expires).
Long press of push-button: Load is dimmed darker ${ }^{1}$.
Display on the motion detector: red LED lights up

Load is switched on for 2 h . After 2 hours have expired, the load stays on for the duration of the delay time ( 4 min ) and the automatic mode is activated.

- Not adjustable in step operation.

Load is switched off for 2 h . The automatic mode is activated after 2 h have expired

## Presence simulation

Press push-button longer than 10 s : Presence simulation is switched on. Load is switched by means of the data recorded in automatic mode.

- Not adjustable in pulse mode.

## Switching on for delay time and saving switch-on brightness ${ }^{1}$

Short press of push-button: The load is switched on brightness and motion-independent for the set delay time.

Press push-button for 3 s : the set brightness is saved as switch-on brightness. The load is switched on and switched off again to confirm

Faulty switching operations can be minimised by adjusting the sensitivity in predefined levels.

Press push-button for longer than 10 s : Sensitivity level is switched on
Sensitivity levels: $25 \%, 50 \%, 75 \%, 100 \%$

## The motion detector is in automatic mode.

Short press of push-button: current ambient brightness is stored as brightness level. In the event of movements, only one switching operation is triggered if the saved brightness threshold value is fallen short of within the measurement environment.

## Teach function active:

- Switched on load is switched off.
- Switched off load is switched on for approx. 1 s .

Brightness measured and saved:

- The load is switched on for the duration of the delay time.

Value range: approx. 1 ... 200/ $\infty$ |x (daytime operation)
The saved brightness threshold value is active after a max of 3 min .

## Button ${ }^{|c|}$ Function

## Detection area

Press push-button longer than 10 s : Selective limit of the detection area.

- Right sensor switched off $30^{\circ}$
- Left sensor switched off $30^{\circ}$
- Both sensors active
- It is not possible to switch off both sensors at once.

IiOwing to the overlapping of both detection areas no sharp separation f the masked areas is possible.

## Brightness threshold value

Short press of push-button: Brightness level is activated.
Preset brightness threshold value of the push-buttons:

- approx. 1 lx (night operation)
- approx 10 Ix (twilight)
- approx. 150 lx (hallways)
- > 250 Ix (daytime operation)

If the set brightness level is exceeded, the motion detector does not switch on the load despite a detected motion.

Brightness threshold value is active after a max of 3 min .

## Fixed delay time

During motion detection, the insert switches on the load for the selected
delay time. Each time a new motion is detected, the delay time starts once again.

Short press of push-button: delay time is activated.
Preset delay times: $30 \mathrm{~s}, 2 \mathrm{~min}, 5 \mathrm{~min}, 30 \mathrm{~min}$.

## Step operation

Press push-button longer than 10 s : Step operation is activated
$\bullet$ No delay time setting is possible.

## Individual delay time

- Button Press START for a short time.

The time measurement starts.

- Press STOP button for a short time.

The time measurement is finished. The set delay time is saved automatically. The motion detector is in automatic mode.
i
The step operation is not possible.

## Dimming phase ${ }^{1}$

|  | Short press of push-button: Dimming phase is activated/deactivated. $\square$ The delay time is increased by approx. 30 s . |
| :---: | :---: |
| Night light function ${ }^{1}$ |  |
| ico | Press push-button longer than 10 s: Night light function, e.g. realisation of emergency lighting is activated. <br> The load is switched on permanently at a basic brightness of $20 \%$. If a motion is detected, the load is switched to $100 \%$ and is dimmed to 20 \% again after the delay time expires. If function is active Off for $\mathbf{2}$ hours or Permanent Off, the light is switched off. |
| Adjustment for outside area |  |
|  | Press push-button longer than 10 s : optimised motion detection for outside area is activated. <br> Display on the motion detector: red LED flashes during motion detection |
| Test mode |  |
| TET | Short press of push-button: Test mode for testing the detection area is activated. <br> The motion detector works with the following values: <br> - Sensitivity: 100 \% <br> - Delay time: 1 s <br> - Brightness threshold value: daytime operation <br> - Detection area: $180^{\circ}$ <br> The motion detector changes to automatic mode after 5 minutes. |

## Button Function

## End Default settings/Special functions

Short press of push-button: Special functions are deactivated.
HSET Press push-button longer than 10 s : The default settings of controller are loaded.

By pressing the RESET push-button the following special functions are deactivated:

- Presence simulation
- Night light function

Switch-off warning

- Adjustment for outside area
- Delay time for step operation

## Reset to Defaults:

Sensitivity 100 \%

- Detection angle $180^{\circ}$
- Brightness threshold value 10 lx
- Delay time 30 s
- Place of use indoor area
- Night light function switched off
- Presence simulation switched off
- Function is only possible in connection with dimmer inserts.

## Assembly and electrical connection

Function:
The BLC presence detector with constant light control responds to heat motions caused by persons, animals or objects. It can be used for switching and dimming of the lighting in offices and common areas. The presence detector switches the lighting on when it detects motion and the brightness is below the set level. The presence detector switches the lighting off if it is no longer needed, i.e. when it is bright enough even without lighting or when there is no longer anyone present. It is also able to evaluate small motions (fine motor functions), such as those that typically occur in offices. It is mounted exclusively on ceilings, and monitors the area located below it, for example. The lighting is switched or dimmed, depending on the BLC insert used. The presence detector switches the lighting on only for as long as it is needed. To expand the detection field, the presence detector can be combined with a BLC controller extension unit insert and connected to the main device.

## Combination with a BLC insert

The lighting is always switched on to maximum brightness. The lighting is switched off when one of the following cases applies:
No more motion is detected and the set delay time has elapsed
The brightness exceeds for at least 10 minutes (e.g. due to more daylight) twice the set value. The fact that the brightness is exceeded is indicated by flashing of the LED.
The lighting is also switched off when there is motion.

## Combination with a BLC dimmer insert

The presence detector first switches the lighting on to maximal brightness. After that it dims the lighting so that the brightness is held constant at the setpoint that has been set (constant light control). As daylight increases, the lighting is dimmed or switched off. As daylight decreases, the lighting is switched on or dimmed up. The constant light control is designed so that the user notices it as little as possible. The lighting is switched off when one of the following cases applies:

- The presence detector detects no more motion and the set delay time has elapsed. The lighting is then dimmed to minimum brightness in at most one minute.
After an additional five minutes without detection the lighting is switched off.
The presence detector has adjusted the lighting to the lowest dimming setting
Never- theless the brightness exceeds 1.5 times the setpoint. After a waiting period of
10 minutes the lighting is switched off regardless of motion.

## Extension unit operation

For manual operation of the presence detector, a BLC extension unit (passive extension unit) is required in combination with a BLC button or a mechanical push-button (NO contact).
Notes:
-When a BLC switch insert is used, no distinction is made between a short press and a long press.

- With a mechanical push-button, no distinction is made between a short press and a long press. This means that dimming and changing of the temporary brightness setpoint is not possible.
Extension unit operation is only possible if there is a cover fitted on the main device. Illuminated push-buttons must be supplied with power via a separate neutral conductor.
Short press (less than 400 ms )

Control surface
Top, Bottom, Full surface or mech. push-button

Load off
The lighting is switched on to max. brightness. The delay time corresponds to the value set on the potentiometer, but is at least 2 minutes. Detected motions extend the delay time to the time set on the potentiometer.

## Load on Lighting is switched

 off for 3 minutes. For more information, see slide showfunctionInformation regarding dimmer inserts
After switching-on, constant light control is performed.
If the lighting was switched off via the extension unit, switching-on can be performed only via the extension unit to the last brightness value

## Slide show function

With a BLC extension unit or a mechanical push-button (NOCs) it is possible to switch the lighting off selectively. If the presence detector detects motion in the next 3 minutes, then the switch-off time is extended. Only after 3 minutes go by without motion being detected is the slide show function ended automatically. If motion is detected now, the lighting may be switched on again, depending on the brightness situation. If you wish to end the slide show function manually, switch the lighting on again manually at the extension unit (for dimmer inserts the brightness before switching-off will be set).
Temporary deactivation of the lighting control
If the presence detector switched the lighting off due to sufficient extraneous light (e.g. daylight), then you can switch the lighting control off manually. To do this, switch the lighting on again at the extension unit within 1 minute after it is switched off automatically.
The lighting now remains switched on as long as the presence detector detects motion. The lighting is only switched off if the presence detector does not detect any more motion and the delay time has elapsed. The lighting control is now active again.

| :--- |
| brightness to maximum |
| brightness. | \right\rvert\,

Notes:
Each press re-starts the set delay time, but for at least 2 minutes.
Each detected motion re-starts the delay time set on the potentiometer.
In presence detector mode the dimmed brightness value is temporarily adopted as the brightness setpoint, as long as the lighting remains switched on. If the dimmer insert's own volatile brightness memory is changed, then a BLC button must be used temporarily for saving on the dimmer insert.
In controller operation the lamps retain the dimmed brightness as long as the lighting remains switched on.
BLC presence detector in combination with BLC extension units for motion detector. The area to be evaluated is expanded. Using up to 10 (5 with main device BLC universa touch dimmer (R, L, C) BLC extension units for motion detector it is possible to evaluate even large areas. If a motion is detected by an extension unit, this is reported to the main device, and the connected load is switched on if the brightness is below the threshold value on the main device.

## Connection in parallel of BLC presence detectors with constant light control is not permitted.

 To expand the detection field, use BLC extension units for motion detector.
## nstallation location

Ceiling mounting in indoor areas.
The detection area should not be limited by furniture, pillars, etc.
Vibration-free installation, because movements of the detector can also trigger a switching operation

During installation, do not subject the sensor window of the presence detector to direct sunlight; this could destroy the sensor

## Sources of interference

Do not install in the direct vicinity of a heat source. Cooling light bulbs and air movements from, for example, fans, heaters and open windows may be
 detected and lead to switching-on again. If necessary limit detection area using supplied push-on cover. The detection area should not be limited by furniture, pillars, etc.

## Settings

The cover can be removed in order to adjust the delay time
operating mode) and brightness threshold value. This makes optimal adjustment possible without detaching the cover.

Delay time
The potentiometer "time" can be used to set the delay time; a change of operating mode is indicated by flashing of the LED.
Step operation: approx. 1 sec . on setting "Test"
Presence mode: approx. 10 min . to 30 min .

## Brightness threshold value

Minimum brightness in the area being monitored. When the brightness drops below this value, the presence detector switches the lighting on when a motion is detected. When a dimmer insert is used, in presence detector mode the minimum brightness is simultaneously used as the setpoint at which the brightness is held constant. When set to marking 0 the automatic initial
 detection is deactivated, switching on is only possible manually via the extension units. For switch inserts the switch-off brightness (brightness setpoint) is approx. 400 lux here.

BLC ceiling controller $360^{\circ}$ or presence detector surface-mounted in through areas

For automatic light switching, for example in through areas, BLC ceiling controllers $360^{\circ}$ combined with BLC extension units for motion detector or presence detectors surface-mounted are to be connected in parallel. Because they are mounted on the sealing, controllers are not immediately accessible, which makes 1 deliberate vandalism more difficult. To ensure switching in response to motion, a detection field diameter of approx. 10 (5) m should be planned. The distance to a door should not exceed 4 (2.5) m. ( ) = Presence detector surface-mounted Area of application: schools, offices, public buildings, etc.

## BLC ceiling controller $360^{\circ}$

The BLC ceiling controller $360^{\circ}$ is operated together with a BLC dimming or switch insert and mounted on the ceiling. The controller switches the lighting on and off depending on motion and the ambient brightness. The controller also detects heat motions of persons, animals or objects.

- Light is switched on: The brightness is below the set threshold and the someone enters the area being monitored.
- Light is switched off: No more motion is detected and the delay time has expired.

## Detection area

The diameter of the detection area depends on the installation height and the direction of motion. For an installation height of 3 m the maximum diameter at the floor is approx. 12 m when approaching and approx. 20 m when crossing.

## Presence detector surface-mounted

The presence detector surface-mounted is used to monitor presence in indoor areas. It is mounted exclusively on ceilings, and monitors the area located below it. It responds to heat motions caused by persons, animals or objects. It is also able to evaluate smal motions (fine motor functions), such as those that typically occur in offices.
When a motion is detected and the brightness is below an adjustable brightness threshold, the load is switched on. The device remains switched on as long as further motions are detected. If no more motion is detected, then the load is switched of after the set delay time. If the brightness on the monitored surface continuously exceeds double the set brightness threshold value (but at least approx. 400 lux), for example due to brighter daylight, then the red diagnosis and settings help LED flashes and the presence detector switches off after 10 minutes at the latest, even if there is motion. The presence detector surface-mounted can only be used for switching applications.

## Extension unit operation

|  | Load off | Load on |
| :--- | :--- | :--- |
| Mechanical | The lighting is switched on The delay time <br> push-button <br> corresponds to the value set on the <br> potentiometer, but at least 2 minutes <br> Detected motions extend the delay time <br> to the time set on the potentiometer. | Lighting is switched off <br> for 3 minutes. <br> For more information, <br> see slide show function |

## Slide show function

With a BLC extension unit or a mechanical push-button (NOCs) it is possible to switch the lighting off selectively. If the presence detector detects motion in the next 3 minutes, then the switch-off time is extended. Only after 3 minutes go by without motion being detected is the slide show function ended automatically. If motion is detected now, the lighting may be switched on again, depending on the brightness situation. If you wish to end the slide show function manually, switch the lighting on again manually at the extension unit (for dimmer inserts the brightness before switching-off will be set).

## Temporary deactivation of the brightness evaluation

If the presence detector switched the lighting off due to sufficient extraneous light (e.g. daylight), then you can switch the brightness evaluation off manually. To do this, switch the lighting on again at the extension unit within 1 minute after it is switched off automatically.
The lighting now remains switched on as long as the presence detector detects motion. The lighting is only switched off if the presence detector does not detect any more motion and the delay time has elapsed. The brightness evaluation is now active again.

## Sources of interference

Do not install in the direct vicinity of a heat source. Cooling light bulbs and air movements from fans, heaters and open windows can be detected and lead to switching on again. If necessary limit detection area using supplied
 push-on cover

During installation, do not subject the presence detector to direct sunlight; this could destroy the detector.

## Settings

The cover can be removed in order to adjust the delay time and brightness. Can be adjusted without dismantling.

-Brightness sensor
Delay time setting
Brightness setting
Test and status LEDs
(brightness settings help)

Delay time
away from windows to avoid the
effects of scattered light
The potentiometer "time" can be used for fine adjustment of the on-time
Test mode: approx. 1 sec. on setting "test"
Presence mode: approx. 10 sec. to approx. 30 min

## Brightness threshold value

Minimum brightness in the area being monitored. When the brightness drops below the set brightness threshold value and there is motion, then the switch is turned on
The potentiometer "lux" can be used to adjust the minimum brightness from approx. 10 lux (symbol moon) to 1000 lux (symbol sun). When set to the marking 0 the presence detector can only be switched on via the extension unit. In this case the switch-off brightness is 400 lux.

## Expansion of the detection area

Connection in parallel of presence detectors surface-mounted "intelligent load linking" Note: All presence detectors connection in parallel surface-mounted must be operated in the same phase. Connection in parallel does not increase the max. connected load. The built-in microprocessor, in connection with a voltage measurement on the load cable, ensures that all presence detectors connected in parallel surface-mounted detect when lighting is switched on. As long as a motion is detected by one of the presence detectors surface-mounted, the lighting remains switched on. The delay time is restarted every time a motion is detected in the respective presence detector surface-mounted.
The lighting is switched off when:

- none of the presence detectors is detecting movement and the last remaining on-time has expired.
- for all presence detectors the brightness in their monitored area is constantly exceeds at least twice the set value.
In this manner it is possible to set up a presence detector system with equal rights without mutual influence.

The detection beams are not optimally cut. The range is reduced.

## $\stackrel{\Delta}{\text { wrong }}$

wrong lamps, heaters or fans in the detection field: Select suitable installation location resp. use push-on cover or the learning digital Controller Berker Control $220^{\circ}$ surface-mounted.

Problems with sources of interference can generally be solved with the teachable digital Controller Berker Control $220^{\circ}$ surface-mounted comfort.

## Controller Berker Control $22 \mathbf{0}^{\circ}$ surface-mounted stands for:

- digital, microprocessor-controlled operation
- digital detection signal evaluation
- digital interference signal suppression
- response sensitivity adjustable
- 4 monitoring planes
- detection angle $220^{\circ}$
- crawl-under protection
- range 16 m
- 145 sectors with over 580 switching segments

■ non-weather-dependent range consistency

- activation brightness from 1 Lux - daytime operation adjustable
- glare-proof (e.g. against torches)
- delay time 2 sec. - 30 min . adjustable
- short-time service 0.5 sec. with immunity time setting

■ additional functions, controller operation/4 hrs. On/4 hrs. Off/Test

- with LED detection and mode indicato
- limit cut-out
- intelligent load linking
- for wall and ceiling installation
- cable entry from all sides
- vertical and horizontal tilting

## Operating principle

The Controller Berker Control $220^{\circ}$ surface-mounted responds to heat movement, such as that triggered by people or motor vehicles. The digital processing of movement signals in the integrated processor means interference is largely suppressed. It activates when consumers, such as lights, are detected. The unit remains on as long as movements are detected, otherwise the Controller Berker Control $220^{\circ}$ surface-mounted switches off at the end of the preset delay time. A short-time service of 0.5 sec . can additionally be set. This makes it possible to operate acoustic signal generators to monitor an entrance door (bell/gong) and lock it for a programmemable immunity time of 1 sec . -10 min . until the next movement. The visual indicator signals the response of the unit.
With the adjustable twilight switch you activate the switching function only as from a desired activation brightness, or you programme daytime operation.

The optical alignment of the sensor head allows you to adapt the unit to specific on-site conditions. Any heat sources triggering unwanted activation can be suppressed by means of the adjustable sensitivity and the self-adhesive masking elements.

The Berker control offers a high degree of protection against ambient light. As the ambient brightness increases, the motion detection only ceases to be evaluated when the preset brightness value has been exceeded for at least 10 minutes
This excludes the possibility of tampering, such as shining a torch on to the controller to prevent it from activating.

As the ambient brightness slowly decreases, motion detection is only evaluated when the brightness level has been below the preset activation brightness for at least 2 minutes. This prevents the controller from responding to merely short-time periods of sub-minimum brightness (such as due to a cloud).

## Mounting instructions

The flexible housing construction of the Controller Berker Control $220^{\circ}$ surface-mounted makes it suitable both for wall and ceiling installation.

To adapt the detection angle to on-site conditions, the sensor head can be inclined and rotated.

Mount the Controller Berker Control $220^{\circ}$ surface-mounted free of vibration, because sensor movements, such as those caused by mounting on a tree, may also trigger the switch.

Mount laterally across the direction of movement If a person moves laterally across the Controller Berker Control $220^{\circ}$ surface-mounted, switching segment 2 senses a negative jump in temperature (e.g. from $20^{\circ} \mathrm{C}$ to $18^{\circ} \mathrm{C}$ ) and switching segment 1 senses a positive jump in temperature (e.g. from $18^{\circ} \mathrm{C}$ to $20^{\circ} \mathrm{C}$ ). This means effective detection and stable ranging.

If a person moves directly towards the Controller Berker Control $220^{\circ}$ surface-mounted the temperature remains virtually constant in switching segment 2. There may perhaps be no detection. The person must approach the Controller Berker Control $220^{\circ}$ surface-mounted more closely to be 'detected'

## Mounting instructions

Do not mount the Controller Berker Control $220^{\circ}$ surfacemounted directly above/next to a light. As the light cools it may be detected as a change of heat and lead to reactivation. If necessary, limit the detection range of the sensor with the masking elements supplied.

When mounting the Controller Berker Control $220^{\circ}$ surface-mounted make sure the controller lens is not pointing towards the sun (sensor may be damaged). In a horizontal position the detection beams may point directly at the sun (see illustration). It is therefore advisable to protect the sensor head against exposure to direct sunlight prior to mounting it on the terminating outlet.

## Detection field

The Controller Berker Control $220^{\circ}$ surface-mounted has a very dense, horseshoe shaped detection angle of 220 , comprising 4 planes with over 145 sectors and 580 switching segments, as well as additional crawl-under protection.
Extent of the detection field:
$16 \times 20 \mathrm{~m}$ see diagram
The 4 monitoring planes are defined as follows:
$1^{\text {st }}$ plane from $\quad 0 \mathrm{~m}$ to approx. 3.0 m
$2^{\text {nd }}$ plane from approx. 3.0 m to approx. 7.0 m $3^{\text {rd }}$ plane from approx. 7.0 m to approx. 11 m $4^{\text {th }}$ plane from $\quad$ approx. 11 m to approx. 16 m Crawl-under protection approx. - 0.4 m to 0 m
The ranges relate to the recommended mounting height of 2.4 m , sensor head aligned horizontally, direction of movement laterally across the Controller Berker Control $220^{\circ}$ surface-mounted, sufficient temperature difference between moving body and surroundings on level ground.

The range is reduced by:

The range is increased by:

- rising ground
- inclined sensor head
- mounting height less than 2.4 m
- low temperature difference

## - falling ground

- sensor head pointing upwards
- mounting height more than 2.4 m
- high temperature difference

If the sensor head is aligned at about $6^{\circ}$ tilt for example (the upper edge of the housing forming a continuous line with the bottom edge of the sensor), the range will be reduced to approx. 12 m .

The masking elements supplied can be used to eliminate sources of interference by limiting the detection angle. To do so, cut the masking elements as required to the size of the individual detection planes or to the desired angle. Then detach the masking elements from the backing sheet and affix them smoothly to the sensor window.

## Terminating outlet

The terminating outlet of the Controller Berker Control $220^{\circ}$ surface-mounted is fitted with 6 cable glands, for custom cable entries from above, below, left, right and rear.
Before installing the terminating outlet, open up the two condensate drains at the bottom (do not do this if installing in dusty rooms).

## Electrical connections

Connections executed as plug-in terminals.
(BK) black: L (phase)
(BU) blue: $\quad \mathrm{N}$ (neutral conductor)
(BR) brown: $\quad \mu$ (relay, lamp cable)
Note: When using energy saving lamps, consider high inrush currents. If necessary use inrush current limiter order no. 185.

## Controller operation/CONTINUOUSLY ON

The "S" switch allows changeovers between
controller operation and CONTINUOUSLY ON.

## Controller operation (monitoring)

 CONTINUOUSLY ONThe "S" switch allows changeovers between controller operation and CONTINUOUSLY ON. When the Controller Berker Control $220^{\circ}$ surfacemounted is switched on and CONTINUOUSLY ON is set, the neon lamp unit lights up.

## Switch off

Using "S1" or "S2" switch.
When switching back on, "S1" activates a switching operation of the Controller Berker Control $220^{\circ}$ surface-mounted for the preset delay time. "S2" does not do this, as only the load is switched on or off.

## Controller operation/CONTINUOUSLY ON

The "S" switch allows changing over between controller operation and CONTINUOUSLY ON.

## With push-button (NC)

Existing switches can be replaced by a push-button "T". Pressing the push-button once for min. 1 sec . activates a non-brightness-dependent switching operation for the preset delay time.
Pressing repeatedly = additional functions.

## Changeover switching

Existing changeover switches can be replaced by push-button "T" (NO). Pressing the push-button once for min. 1 sec . activates a non-brightness-dependent switching operation for the set delay time.
Pressing repeatedly = additional functions.

## With push-button (NO)

Pressing push-button "T" (NO) once for min. 0.5 sec . activates a non-brightness-dependent switching operation for the preset delay time.

## Auto/manual operation with series switch

S1 open, S2 open: all off.
S1 closed, S2 closed: CONTINUOUSLY ON
S1 closed S2 open: controller operation

Auto manual mode with 3 -step switch
1 Controller operation
2 All Off
3 CONTINUOUS ON

## Operation of a relay or contact maker

For potential-free NO and NC contacts and to
increase switching capacity.

Connection of multiple Controller Berker Control $220^{\circ}$ surface-mounted "with intelligent load linking"
Caution: All parallel connected Controller Berker Control $220^{\circ}$ surface-mounted must run on the same phase.
Parallel connection does not increase the max. connected load
The built-in microprocessor in conjunction with a voltmeter on the load cable means that all parallel connected Controller Berker Control $220^{\circ}$ surface-mounted detect the switching on of a light. As long as a movement is detected by a Controller Berker Control $220^{\circ}$ surface-mounted, the lighting remains on. The delay time is restarted every time a movement is detected in the relevant Controller Berker Control $220^{\circ}$ surface-mounted. It expires only when no more movement is detected. The delay time is determined by the Controller Berker Control $220^{\circ}$ surface-mounted with the longest remaining time. This makes it possible to construct a controller system comprising units with equal rights, with no mutual interference.

## Additional functions

The Controller Berker Control $220^{\circ}$ surface-mounted permits 4 different operating modes, using push-button (NC)
in the lead cable:
Press 1x: non-brightness-dependent switch-on for the preset delay time, then brightness-dependent controller operation.
Press 2x: the Controller Berker Control $220^{\circ}$ surface-mounted switches on for 4 hours, then brightness-dependent controller operation.
Press 3x: the Controller Berker Control $220^{\circ}$ surface-mounted switches off for 4 hours, then brightness-dependent controller operation.
Press 4x: test mode: brightness evaluation is disabled. The Berker control unit switches on for approx. 3 seconds when a movement is detected.

## Limit cut-out

Once the Controller Berker Control $220^{\circ}$ surface-mounted has switched on, the
brightness is no longer evaluated. To prevent the lighting from remaining on when there is continuous movement in the detection range (e.g. after dawn), the unit is fitted with a limit cut-out. The delay time (time in which the light remains on after no more movement is detected) is shortened depending on the overall on time.

## On time

## Delay time

Up to 60 min .
Set time
Up to 70 min .
4 minutes
Up to 75 min .
2 minutes
Up to 80 min .
Up to 85 min .
Up to 90 min.
,
15 sec .
90 min .
15 sec.
The Controller Berker Control $220^{\circ}$ surface-mounted thus cuts out after 90 minutes at the latest, even if there is continuous movement in the detection field. It is switched back on if the brightness falls below the preset value and there is movement.

## Operating principle

Controllers respond to heat movement in the infrared light band. It is in this range that the human body radiates heat. Lamps such as incandescent and halogen lamps etc. also emit considerable amounts of heat in this range too, however. As a result, the heat movement of people, animals or light sources can trip the controller, which then switches on consumers such as lighting. The unit remains on as long as movements are detected, otherwise the controller switches off at the end of the pre-set delay time. To prevent lights installed within the detection range tripping the controller, the controller response is delayed by 3 seconds.

## BLC controller 180

- BLC controller 1.1 m and 2.2 m
- BLC controller comfort 1.1 m and 2.2 m
with slide switch for off/automatic/on
- System controller $180^{\circ}$ and $240^{\circ}$ surface-mounted Limitation of detection range to only $90^{\circ}$ with masking element or by different mounting height (for controller 2.2 m)

## Controller surface-mounted

Controller $70^{\circ}$ surface-mounted
Limitation of detection range by locked settings for ranges 4,6 or 8 m .

Automatic Controller Plus $110^{\circ}$ surface-mounted

Limitation of detection range with masks and and covers, also by tilting and rotating.

## System controller $180^{\circ}$ and $240^{\circ}$ surface-mounted

Limitation of detection range as desired with hood, also by tilting and rotating.
If the System controller $240^{\circ}$ surface-mounted is tilted, the detection angle should be reduced to $180^{\circ}$,
otherwise excessive lateral range will occur.

## Lamps within the detection range

The lamp being switched must not be placed in the immediate vicinity of or underneath the controller, because the radiated heat can cause unwanted switching. There should be adequate distance between the light and the controller.

## Optimum mounting location

For optimum detection and range for movement, Berker controllers should be installed laterally to the direction of walking. The controller's detection beams are then crossed laterally. When using multiple controllers and/or extension units, the detection ranges of the individual controllers should overlap, in order to ensure optimum monitoring. If the controller is placed such that the person being detected appro-aches the unit only frontally, range restriction is to be expected. For this a controller with enhanced approach response (controller $70^{\circ}$ surface-mounted, Controller Berker Control $220^{\circ}$ surface-mounted) should be configured.

## Detection for large areas

For detection in larger areas (squares, long corridors etc.) in which the detection angle of an individual controller is not sufficient, controllers with extension units, a controller system, networked Controllers Berker Control $220^{\circ}$ surface-mounted or radio controllers should be deployed, with the detection ranges of the individual devices overlapping. Parallel connection of controllers is not advisable, because it may cause so-called reciprocal action (switching back on again after a short cut-out of approx. 3 sec ).

Important planning criteria for controller installation
The mounting height of the controller as set out in the tables should be complied with, as failure to do so will result in restricted range or excessive range. At the recommended mounting height the detection height can be adjusted, depending on the controller, by means of tilting and locking and using the hoods, covers, masks and adhesive labels supplied, thereby avoiding unwanted switching. The ranges of the controllers/system controllers may vary due to the effects of weather conditions (fog, rain, snow). Where there is little temperature difference between the object being detected and the ambient temperature, range restrictions may occur.

## Extension units

When using BLC controllers with BLC extension units for motion detector, a generous overlap between the detection ranges should be allowed in order to ensure detection.

## Curtaining effect and range optimization

By tilting the controller downwards its range can be steplessly adjusted. Detection then occurs only in the close-up range. When using the controller system sensor 240 , detection can be further optimized by reducing the sensitivity.

## Installation location

The controller should be protected against direct rainfall, because rain drops on the lens may cause unwanted switching
A special protective screen in front of the controller protects it against the effects of thermal influence.

## During installation

When installing the controller, it should be ensured that the lens is not exposed to direct sunlight (otherwise the sensor may be damaged). In a horizontal position the detection beams may point directly at the sun (see illustration). It is therefore advisable to keep the sensor head away from sunlight until it is mounted on the housing body.

## Accessories

Use of the mounting accessories allows the controllers to be fixed at difficult locations, such as on ceilings or masts, or in corners.

## Controller system

The controller system can be used wherever multiple controllers are used to switch the same load. The controller system is installed as described below.

## Connection:

## Important!

Each controller system sensor has a brightness sensor, but only one brightness sensor may be connected within a system, i.e. the "Lx" terminal is assigned to only one controller system sensor. Only this controller system sensor measures the brightness and forwards this value to the controller system power section for evaluation. In figures 1 and 2 the controller system sensor with the active brightness sensor is identified by an "X".

## Cabling

Connection in parallel as per Figure 1 or in star configuration as per Figure 2. Mixed forms are also permissible.
Communication lines are recommended for connection of the controller system sensors, e.g. JY-ST-Y $2 \times 2 \times 0.8$ or YR $4 \times 0.8$

## Diagnosis LED

To enable the controller system to be tested accurately, the controller system sensors are fitted with a testing and diagnosis LED. This LED lights up in response to every movement, regardless of brightness.
This enables the functioning to be checked and the detection range adjusted without switching on the load.

Connection of multiple controller system powerpacks to a single controller system sensor cable is not permissible, malfunctions will result. To increase the connected load use a contact maker.

## Connecting terminals:

+,- : Power supply $15 \mathrm{~V}=$
S: Switch signa
Lx: Brightness signal
Lxo: Unconnected terminal, which can be used to loop-through the Lx signal.

## Crawl-under protection

The controller system sensor 240 has separate crawl-under protection. This means that movements underneath the controller system sensor are also detected, right up to the house wall. This results in an even higher degree of security.

## Limit switch-off

If the controller system power pack is switched on, the response brightness is no longer evaluated. However, so that even when there is constant motion in the detection area (e.g. after dawn) the lighting does not remain switched on unnecessarily, the controller system power pack is equipped with a limit switch-off.
The delay time (time in which the light still remains switched on after no more motion is detected) is automatically shortened depending on the entire on-time. The controller system power pack thus switches off (even if there is constant movement in the detection area of the controller system sensors), at the latest after 90 minutes. It switches on again when the brightness drops below the set response brightness and there is motion in the detection area.

| total on-time | shortening of <br> the delay time |
| :--- | :--- |
| up to 60 min. | setting |

## Connection diagrams

Controllers/System controller power unit 230 V
By combining controllers/controller systems with push-buttons or switches, different switching variants can be implemented.

Controller (control) /
CONTINUOUSLY ON
The "S" switch allows changing over between controller operation and CONTINUOUSLY ON.
When the controller is switched on and CONTINUOUSLY ON is set, the neon lamp unit is lit.

## Changeover switching

Existing changeover switches can be replaced by push-button "T" (NCC). Pressing the "T" (NCC) push-button once for min. 1 sec . activates a non-brightness-dependent switching operation for the set delay time.

With push-button (NCC)
Pressing the "T" push-button NCC for min. 1 sec. activates a non-brightness-dependent switching operation for the preset delay time.

## Operation of a relay or

3 CONTINUOUS ON

Operation of timer or flash relay
Extension of the delay time or operation of a clock relay (e.g. for flash circuit).

1-10 V Control units
Increasingly in lighting engineering, electronic ballasts and Tronic transformers fitted with a $1-10 \mathrm{~V}$ interface are being deployed to operate lighting (such as fluorescent lamps, 12 V halogen lamps). If multiple devices are connected using a single control wire with 1-10 V control inputs, the 1-10 V Rotary potentiometer can be used to adjust the brightness from a remote location. The push-button control unit 1-10 V built-in and the BLC can be used to adjust the lighting to individual needs from different points. In this way, extensive and complex light systems can be implemented. The control units 1-10 V (1-10 V Rotary potentiometer, 1-10 V Push-button rotary potentiometer and 1-10 V Push-button control unit built-in) from Berker are used to switch the electronic ballast mains voltage on and off as well as for problem-free adjustment of the control voltage at the $1-10 \mathrm{~V}$ interface of the devices.
The 1-10 V Rotary potentiometer is covered by a centre plate with regulator knob and frame, in keeping with the familiar dimmer design

Example:
The total of electronic ballast control currents with the 1-10 V Rotary potentiometer may be max. 50 mA , and the sum total of electronic ballast load currents (consider the inrush current) may be max. 6 A. Follow the ballast and lighting manufacturers specifications regarding the control and load currents (with inrush currents).

Typical: Osram electronic ballast $2 \times 58 \mathrm{~W}$, control current $\mathrm{I}_{\mathrm{ST}}=6 \mathrm{~mA}$, Load current $I_{L}=0.55$ A per electronic ballast. 83 electronic ballasts are connected
$\mathrm{I}_{\mathrm{ST}}=83 \times 0.6 \mathrm{~mA}=$ approx. $50 \mathrm{~mA} ; \quad \mathrm{I}_{\mathrm{L}}=83 \times 0.55 \mathrm{~A}=45,7 \mathrm{~A}$

## Result:

The control contact is fully loaded.
Since electronic ballasts have an electrolytic capacitor in their input circuit, high inrush currents are to be expected. If the permissible number of ballasts is exceeded (see table), a contactor must be used to switch them, or an inrush current limiter, order no. 185 must be connected in series upstream of the respective ballast.

Maximum number of electronic ballasts that can be switched without additional fittings. 1-10 V Rotary potentiometer: 5 two-lamp or 10 one-lamp Osram electronic ballasts 15 two-lamp or 30 one-lamp electronic ballasts Insta 42 W, 13 Berker Tronic- transformer 20-105 W
1 - 10 V Push-button control unit built-in: 5 two-lamp or 10 one-lamp electronic ballasts Insta 42 W

1-10 V Push-button control unit built-in /daylight-sensitive control (constant light control)

## Tronic transformer with 1-10 V interface

In complex modern lighting systems, lamps are increasingly being operated by way of electronic ballasts (German:"EVGs") fitted with a 1-10 V interface.
This permits convenient dimming even of high power outputs from one central point or from several distributed points. This $1-10 \mathrm{~V}$ interface is now offered with the Tronic transformer.
Up to 50 Tronic transformers with 1-10 V interface can be regulated on the control side with a 1-10 V Rotary potentiometer and up to 250 with the $1-10 \mathrm{~V}$ Push-button control unit built-in. This allows electronic ballasts to be combined with 1-10 V interfaces. When dimensioning a system, the control and load currents must be considered separately!

| Technical data | $230 \mathrm{~V} \sim, 50 \mathrm{~Hz}$ |
| :--- | ---: |
| Nominal voltage | 0.45 A |
| Primary rated current at full load | $20-105 \mathrm{~W}$ |
| Power range | 0.96 |
| Power factor | $95 \%$ |
| Efficiency $\lambda$ | 11.8 V |
| Rated output voltage | Bulb-preserving switch-on |
| Softstart | approx. 0.8 mA |
| Control current | max. $50^{\circ} \mathrm{C}$ at maximum load |

## Info pilot lamp

The info pilot lamp is marked by uniform illumination and clear visibility (even from the side). The labelled sheet selected from the supplied range can optionally be placed above or below the factory-fitted milky cover, depending on whether the notice (or pictograph) is to be visible at all times or visible only when the light signal is on. By the use of a monitoring switch, the on state of the info pilot lamp can also be also indicated at a different location.

Application: e.g. in waiting rooms, outside of conference rooms doctors' surgeries, etc.

Tronic transformer for 12 V halogen lamps

- Bulb-preserving soft startup
- Very low noise
- Short circuit proof
- No fuse changing
- Automatic restart
- Overload and excess temperature-
proof by power reduction
- Input and output electrically isolated
- Safety extra low voltage (SELV)
- Tronic dimmer, universal dimmer and Tronic transformer are
specially co-ordinated for use together (no interference)
- Berker Igel also dimmable with Ldimmers (R, L)

Flicker free

- Light weight

Low loss

- Output voltage almost independent of load

Installation configurations of Tronic transformers

1. Do not use dimmers made by other manufacturers, as a risk of fire cannot be ruled out!

## Secondary cable length

## Overvoltage protection module

Tronic transformers are spike proof up to 1500 V . To protect against higher overvoltages (occurring for example when fluorescent lamps, gas discharge lamps and under other inductive loads for are switched off), separate load circuits should be installed for Tronic transformers and those consumers. It is advisable to install an additional overvoltage protection in systems of this kind.

Technical data
Rated alternating voltage
Leakage current $I_{S}(8 / 20)$

\. 1 overvoltage protection module is sufficient for 10 Tronic transformers. In dimmed installations, connect overvoltage protection module before dimmer (see wiring diagram)

## SCHUKO socket with overvoltage protection

The applications for the SCHUKO socket with overvoltage protection are in power supply unit protection e.g. for IT systems, medical equipment, instrumentation and control equipment, and TV, video and audio equipment. The basic circuit comprises a combination of varistors and gas filled surge arresters. Varistors can be overloaded by excessive or frequent overvoltage.
The consequence is an increase in leakage current through the components, and an associated increase in heat. For this reason the varistors are monitored by a thermal cut-out and isolated from the mains power before they become too hot; the mains voltage remains connected. The cut-out is signalled by the red indicator lamp on the socket cover. At the same time an acoustic fault alarm (buzzer) is activated. Unplugging the appliance stops the acoustic alarm. The visual signal is not dependent on whether a plug is in the socket or not. The lamps incorporated into the socket have the following meanings:
Green lamp lit: mains voltage present
Red lamp lit (buzzer sounds): the thermal cut-out has tripped, the overvoltage protection function is no longer operational. The SCHUKO socket with overvoltage protection needs to be replaced.

## Overvoltage protection module

Thermostat
The thermostat controls the temperature in enclosed spaces, such as homes, schools, workplaces etc.

Installation location

- An inside wall opposite the heating source is the preferred installation location.

■ Installation height approx. 1.5 m above the floor.
$\square$ Avoid external walls and draughts from windows and doors.

- Do not install the controller within shelving units or behind curtains and similar coverings.

■ Extraneous heat affects the control accuracy.
■Avoid direct sunlight and do not install near televisions, radios and heaters, lamps, chimneys and heating pipes.
-If the controller is mounted in combination with a dimmer under a shared switch frame, then the distance between the two devices should be as great as possible. In the case of an arrangement one above the other, the controller should be below the dimmer.

## Electrical connection

Connect all the cables according to the corresponding circuit diagram. Connect the neutral conductor to the N terminal. If this does not take place, then extreme temperature fluctuations will occur, as the controller does not work without thermal recirculation. The function is only dependent on the bimetal. No protective conductor is required, as the device is insulated.

| Power consumption | 0.15 W , with night lowering 0.3 W |
| Switching temperature difference | approx. $0.5^{\circ} \mathrm{C}$ |
| Temperature lowering | approx. $4^{\circ} \mathrm{C}$ |
| Order no.: | $2030 .$. |

The scaling on the thermostats at the correct installation location corresponds to:

$$
\begin{array}{ll}
\text { 楾 }=\text { approx. } 5^{\circ} \mathrm{C} & \text { approx. } 20^{\circ} \mathrm{C} \\
3=\text { approx. } 10^{\circ} \mathrm{C} & 5=\text { approx. } 25^{\circ} \mathrm{C} \\
3=\text { approx. } 15^{\circ} \mathrm{C} & 6=\text { approx. } 30^{\circ}
\end{array}
$$

Thermostat
This thermostat controls the temperature of underfloor heating systems. The required floor temperature is set using the adjusting knob. If the set floor temperature is not reached, the control unit then requests heat and shows this through a red LED. The heating is switched on or off using the mains switch. Night lowering can be activated using an additional connection through an upstream timer or control switch. This is displayed by the green LED on the setting knob lighting up. The temperature is reduced by approx. $5^{\circ} \mathrm{C}$.
For temperature measurement, install the sensor in the floor in a protective pipe. The sensor cable can, if necessary, be extended using a 2-core cable of $1.5 \mathrm{~mm}^{2}$ cross section without influencing the precision of the controller. When laying the cable ducts or when close to high current conductors, a shielded cable should be used.

Characteristic sensor values: Measuring device internal resistor Ri > 1 MOhm

| $05^{\circ} \mathrm{C}$ | 85.279 k Ohm |
| :--- | :--- |
| $10^{\circ} \mathrm{C}$ | 66.785 k Ohm |
| $15^{\circ} \mathrm{C}$ | 52.33 k Ohm |
| $20^{\circ} \mathrm{C}$ | 41.272 k Ohm |
| $25^{\circ} \mathrm{C}$ | 33.000 k Ohm |
| $30^{\circ} \mathrm{C}$ | 26.281 k Ohm |
| $35^{\circ} \mathrm{C}$ | 21.137 k Ohm |
| $40^{\circ} \mathrm{C}$ | 17.085 k Ohm |
| $45^{\circ} \mathrm{C}$ | 13.846 k Ohm |
| $50^{\circ} \mathrm{C}$ | 11.277 k Ohm |

The resistance values can only be measured when the sensor is disconnected.
Install the temperature sensor in the ductwork in the floor, so that it is located between 2 heating conductors.

Thermostat insert for underfloor heating

Thermostat, NO contact, with centre plate, time-controlled [order no. 2044 ..]
The time-controlled thermostat enables weekday and time-dependent control of the room temperature in automatic mode. The current temperature value is determined via the internal sensor and compared with the setpoint value. When the temperature falls below the setpoint value, the heating system is activated.

I
An external sensor for measuring the floor and room temperature can also be connected.

(1) Push-button Menu/ $\leftarrow$ (2) Push-button -
3) Push-button + (4) Push-button Info/OK 5) Indication of current ime/Help texts 6) Indication of heating mode (7) Indication of weekday (8) Indication of room or floor emperature 9) Indication of Function/ Settings

Fig. 1: Overview of the operation and display elements

## Product features

- Can be used as room thermostat, floor thermostat or room thermostat with limiter.
- For floor heating, control using room and/or floor temperature possible
- Connection for external floor temperature sensor/remote sensor
- Switchover manual/automatic mode
- For heating or cooling mode
- Type of actuator (currentless closed/open) adjustable
- Control method: PWM (Pulse Width Modulation) or 2 point (On/Off
- PWM cycle time and hysteresis (for two-point control) adjustable
- Indication of the room or setpoint temperature, switchable
- Manual temperature value adjustment
- 3 preset time/temperature programs, individually adjustable
- 3 blocks of days: Mon-Fri, Sat-Sun, Sun-Mon
- Max of 9 events per weekday adjustable
- Max of 9 events per week
- Vast protection function
be switched off
Upper and lower floor temperature limiter for use as room thermostat with limiter, adjustable
- Holiday program with date activation
- At home function for temperature control regardless of weekday according to
time and temperature specifications of the set program
- Self-learning heating curve, can be switched off
- Timer for changing the temperature by the hour
- Automatic summer-/winter time switching (can be switched off)
- Large, backlight LC display LC with text display
- Programmable with operating unit removed
- Access protection (disabling of thermostat by key combination)
- Operating hours counter or energy consumption display adjustable
- Operating languages are adjustable: German, English, Dutch or French

## Time/temperature diagram

Fig. 2: Day profile program 1

Fig. 3: Day profile program 2

Fig. 4: Day profile program 3
The last temperature setback always takes place at 22:00h in all preset day profiles.

## Function Optimum Start

The device detects automatically when the heating cycle must start so that the setpoint temperature is reached at the set time (self-learning heating curve).

Fig. 5: Self-learning heating curve based on the example of the weekday profile of program 1

## Assembly and electrical connection

i
Extraneous heat affects the control accuracy.
An inside wall opposite the heating source is the preferred installation location. Installation height approx. 1.5 m above the floor.
Avoid installation on outside walls or draught from windows or doors.
Controller not within shelving units or behind curtains and similar coverings. Install coverings (except with remote sensor).
Avoid direct sunlight and do not install near televisions, radios and heaters, lamps, chimneys and heating pipes.
When installing in a 3, 4 or 5gang frame, the distance between the thermostat time-controlled and a dimmer should be as big as possible. In the case of an arrangement one above the other, the controller should be below the dimmer.

Fig. 6: Connection diagram for thermostat, NO contact, with centre plate, time-controlled

## Installation of temperature sensor [order no. 161]

- The temperature sensor for floor heating systems must be installed in an empty conduit between two heating conductors. If a temperature sensor is connected, the temperature measured there is displayed (for sensor values see floor temperature controller on page T36).
-For controlling a room separated from thermostat the temperature sensor can be installed with a sensor insert order no. 75941001 at an appropriate installation location.

| Specifications | Thermostat; NO contact, with centre plate, time-controlled |
| :--- | ---: | :--- |
| order no. 2044 .. |  |

## RolloTec

Error on parallel switching of conventional tubular motors

Figure 1: Parallel-switched conventional tubular motors

## RolloTec cutoff relay

RolloTec cutoff relays are mounted in water-protected junction boxes or in wall boxes, flush-mounted, e.g. behind a blanking cover or a RolloTec insert. RolloTec cutoff relays RMD are snapped onto the 35 mm DIN hat profile rail.
The following variants are available, depending on the desired operating concept

- RolloTec cutoff relay built-in/surface-mounted, order no. 2930 and RolloTec cutoff relay RMD, order no. 2931 for simultaneous movement of two motors using one operating point.
- RolloTec cutoff relay built-in/surface-mounted, order no. 2969 and RolloTec cutoff relay RMD, order no. 2919 with extension circuits for simultaneous movement of two motors using one operating point or separate operation of the individual motors.
\$ Connect a maximum of 6-8 motors to one miniature circuit-breaker (note current consumption). Additional miniature circuit-breakers should be planned for extensions.

RolloTec cutoff relay [2930, 2969]
Connection of motors with cutoff relay
N cable required at the terminal connection.

Figure 3: Connection diagram for RolloTec cutoff relay built-in/surface-mounted

| Technical data | RolloTec cutoff relay |
| :--- | ---: |
| Rated voltage | $230 \mathrm{~V} \sim$ |
| Rated frequency | $50 / 60 \mathrm{~Hz}$ |
| Control voltage | $230 \mathrm{~V} \sim$ |
| Fuse | 10 A |
| Circuit breaker | Characteristic A or B |
| Current consumption (operation) | approx. 10 mA |
| Switching current per output | 8 A |
| - ohmic | 3 A |
| - inductive | $100 \%$ |
| Switch-on time (ED) | min. 0.5 s |
| Change-over time for change of direction | $0 \ldots 0^{\circ} \mathrm{C}$ |
| Operating temperature | IP 20 |

When the switch is actuated, both drives are switched to the same direction of running.
When drive 1 has reached the limit position, the limit position switch L2 opens. However, drive 2 may still be functioning and will use feedback voltage through its condenser to set drive 1 moving in the opposite direction so that $L 2$ is shut again after a short time. This means that drive 1 will again run in the original direction until the contact L2 is reopened.

These switching operations can be seen through a pendulum motion of the roller blind.
As the feedback voltage may be up to 1000 V and many switching position changes happen in a very short time, limit switch E2 is overloaded. This will cause the contacts to weld together. This deactivates the final switch-off in this running direction and the motors are destroyed.

1. Overloading of the limit switches through parallel switching of conventional tubular motors. Motors or roller blinds may be destroyed. For joint control, use Berker cutoff relays or electronic tubular motors, such as those from Becker, Elero or Selve.

Figure 2: Installation plan for cutoff relay

38 mm

## RolloTec combinations with 9 covers for 4 inserts

## RolloTec insert comfort for DC drives

A A $24 \mathrm{~V}=$ SELV power supply with protective isolation must be used to supply the
RolloTec comfort insert for DC drives and to activate the extension unit inputs.

As long as an up command $1 \oplus$ and $2 \Theta$ is present at the extension unit input,
the drive on the unit itself cannot be operated either manually or automatically. Individual control with mechanical extension unit

## RolloTec insert without neutral conductor connection

Checking the suitability of motors with mechanical limit switches:
To replace a mechanical shutter switch/push-button with the RolloTec insert without a neutral conductor, first check the suitability of the motor.
The RolloTec insert has no neutral conductor connection and draws its power supply from the motor. Some motors develop such a high voltage during operation that the insert could be destroyed. The check should therefore be performed with a shutter switch/push-button and not with the RolloTec insert without neutral conductor connection.

Measure the mains voltage (UN) and the motor voltage (UM) in up and down directions using a voltmeter. Compare the measured values for the up and down directions and the measured mains voltage using the following diagram. Locate the measured mains voltage (UN) on the left-hand axis. Connect the measured value in the diagram through the mid point ( M ) to the right-hand axis (motor voltage UM). If your values measured on the motor do not exceed the maximum voltage vita. If your values measured on the motor do not exceed the maximum
motor voltage given in the diagram, the motor can be used in combination with the RolloTec insert without neutral conductor.

## Example (blue arrow):

The measured mains voltage (UN) is 221 V . Connect the value 221 V on the left-hand axis in the diagram through the mid point $(\mathrm{M})$ to the right-hand axis with the motor voltage (UM). This gives a max. permitted motor voltage (UM) of 404 V .

Checking the suitability of motors with electronic limit switches:
Motors with electronic limit switches operate according to different principles depending on the manufacturer. The insert cannot normally be destroyed by motors with electronic limit switches. Make sure that you check the function of the RolloTec insert without neutral conductor connection in conjunction with this type of motor.

Individual control
$!$
No extension unit operation possible. Unit can only be used in conjunction with a (mechanical or electronic).

| Technical data | RolloTec insert without neutral conductor connection |
| :--- | ---: |
| Nominal voltage | $230 \mathrm{~V} \sim, 50 \mathrm{~Hz}$ |
| Relay contacts | 2 potential carrying NOC (mutually interlocked) |
| Switching current | max. 1 motor 1000 W |
| Reversing time | min. 1 sec. |
| Circuit breaker | max. 16 A |
| Radio interference suppression | to EN 55015 |
| Terminals | Screw-type terminals for max. $2.5 \mathrm{~mm}^{2}$ or $2 \times 1.5 \mathrm{~mm}^{2}$ |
| Operating temperature | 5 to $35^{\circ} \mathrm{C}$ |
| Order no.: | 2911 |

## Individual control with RolloTec inserts

| Technical data | RolloTec insert and insert comfort |
| :--- | ---: |
| Nominal voltage | $230 \mathrm{~V} \sim, 50 / 60 \mathrm{~Hz}, \mathrm{~N}$ conductor required |
| Switching capacity | max. 1 motor 1000 W |
| Relay output | 2 potential carrying NOC (mutually interlocked) |
| Extension unit inputs (comfort insert only) | $230 \mathrm{~V} \sim$ (do not lay low current line) |
| Reversing time | min. 1 sec. |
| Circuit breaker | max. 16 A |
| Radio interference suppression | according to EN 55015 |
| Terminals | Screw-type terminals for max. $2.5 \mathrm{~mm}^{2}$ or $2 \times 1.5 \mathrm{~mm}^{2}$ |
| Operating temperature | 5 to $35{ }^{\circ} \mathrm{C}$ |
| Order No.: | 2925,2975 |
|  |  |

Individual control with RolloTec insert comfort and extension unit

RolloTec inserts: Master control and individual control in one phase

RolloTec inserts: Master and group control in different phases

RolloTec inserts: operation at several RCDs

Sensor connection options to RolloTec inserts

Sensors must not be connected in parallel to multiple RolloTec inserts.

Various options are available for connecting the sensors (brightness sensor/magnetic contact/glass breakage sensor):
a) The sensor cable can be routed easily from the wall box, flush-mounted through the tunnel in the RolloTec insert as far as the terminal block and securely connected.
b) The sensor cable can be fed through the cable duct between the base plate and the flush-mounted wall box and fixed to the terminal block.
c) For mounting, the sensor cable connector can be plugged into the lower sensor connection. This connection can be detached at any time in order to prevent unwanted lowering (e.g. of balcony door roller shutters) (not with magnetic contact).

Sun protection function: with brightness sensor order no. 169
If the sunlight value ( 20000 Lux or programmable - see technical data) is exceeded by 2 minutes, the hanging automatically moves down until the sensor is concealed; then moves up a little until the sensor is exposed once more. If the brightness remains below the preset level for 15 minutes, the hanging is raised again.
The sun protection function is only activated when the hanging has been moved to its end position by a continuous run operation. To attach, clean the glass with meths or similar, and the sensor with washing up liquid. Rinse the sensor in clean water and affix it to the window glass.

## Twilight function:

The twilight function (only with timer) is activated approx. 90 minutes before sunset (see astronomical curve).
The hanging is lowered about 5 minutes after the brightness has fallen below the programmed level.

| Technical data | RolloTec brightness sensor |
| :---: | :---: |
| Maximum sensitivity of diode | at $\lambda$ approx. 850 nm |
| Sunlight brightness values |  |
| Push-button comfort with radio button for sensors | approx. 5000 to 80000 Lux, prog. |
| Memory button with sensor connection | approx 20000 Lux, fixed |
| Timer with sensor connection | approx. 1000 to 76000 Lux, programmable |
| Twilight brightness values (only timer 1775..) | approx. 6 to 300 Lux, programmable |
| Temperature range | -30 to $70^{\circ} \mathrm{C}$ |
| Index of protection | IP54 |
| Cable length 2 m , ext | ndable to approx. 10 m with telephone cable Y $2 \times 2 \times 0.6 \mathrm{~mm}$, connect shield to ground! |
| Order No.: 169 |  |

## RolloTec glass breakage sensor

The glass breakage sensor is affixed to the window pane. If the glass is broken, the roller shutter is automatically lowered, thereby protecting the property from the weather and from unauthorised intrusion. The roller shutter remains closed until an Up command is sent from the associated control mounting. Master commands are not executed, and brightness values are not processed. Attachment: clean the surface of the glass with spirit or methyl alcohol etc., and affix the sensor to the window pane with special LOCTITE adhesive (see operating instructions)

## Technical data <br> Contact

RolloTec glass breakage sensor
pole NCC contact
Action radius
350 m 2 metres
Contact resistance No load max. 30 Ohm
Alarm condition min. 1 MOhm

Alarm duration approx. 0.5-5 sec.
Connection cable LIYY $2 \times 0.14 \mathrm{~mm}^{2}$ Temperature range
Index of protection -30 to $70^{\circ} \mathrm{C}$

Max. number
Cable length
2 m , extendable to approx. 10 m with telephone cable $J-Y(S T) Y 2 \times 2 \times 0.6 \mathrm{~mm}$, connect shield to ground.

## RolloTec brightness sensors

External brightness sensor

By connecting the RolloTec brightness sensors surface-mounted to the RolloTec insert the sun protection function can be implemented. If the preset Lux value is exceeded, the shutter is lowered such that slits of light still come through

| Technical data | Magnetic contact order no. 925101/02 |
| :--- | ---: |
| Contact | 1pole NCC contact |
| Number of wires | 2 |
| Operating distance | 5 to 12 mm |
| Switching voltage | Max. $40 \mathrm{~V}=$ |
| Switching capacity | max. 10 W |
| Switching current | max. 0.5 A |
| Index of protection | IP 67 |
|  | $925102 / 925101$ |

The adapter serves as an extension and to connect the connecting cables for a brightness sensor and a glass breakage sensor.

## Technical data

Number of sensors on connector
RolloTec adapter for sensors order no. 171
Max. 1 brightness sensor
and max. 1 glass breakage sensor

Magnetic contact
When the window is opened the roller shutter is closed. An up command on the associated individual control is the only way to move the roller shutter back up. Effective break-in protection is achieved by series connection of magnet contacts and glass breakage sensors.

## Magnetic contact connection

RolloTec adapter for sensor

RolloTec interface surface-mounted for wind sensor

Settings for the RolloTec interface surface-mounted for wind sensor Sensor switch for type setting:
= Berker / order no.: 172 (obsolete type)
$2=$ Berker / order no.: 17201 and
Thies / order no.: 4.3515.50.000 (heated)
The rotary switch sets the limit value:
Position of
rotary switch wind speed

$\quad$| 3 | Bft - approx. $3.3 \mathrm{~m} / \mathrm{s}-12 \mathrm{~km} / \mathrm{h}$ |
| :--- | :--- |
| 4 | Bft | Bft - approx. $5.5 \mathrm{~m} / \mathrm{s}-20 \mathrm{~km} / \mathrm{h}$ Bft - approx. $8.0 \mathrm{~m} / \mathrm{s}-29 \mathrm{~km} / \mathrm{h}$ Bft - approx. $11.0 \mathrm{~m} / \mathrm{s}-40 \mathrm{~km} / \mathrm{h}$ Bft - approx. $14.1 \mathrm{~m} / \mathrm{s}-51 \mathrm{~km} / \mathrm{h}$ Bft - approx. $17.2 \mathrm{~m} / \mathrm{s}-62 \mathrm{~km} / \mathrm{h}$ Bft - approx. $20.8 \mathrm{~m} / \mathrm{s}-75 \mathrm{~km} / \mathrm{h}$ O Bft - approx. $24.5 \mathrm{~m} / \mathrm{s}-88 \mathrm{~km} / \mathrm{h}$ $\mathrm{Bft}=$ Beaufort scale

Function test:
Select rotary switch position 1 or 2 (test), start the wind sensor in rotation, the LED will flash. After 15 seconds continuous rotation (e.g. with a hair dryer) the contact will close

RolloTec insert comfort with RolloTec interface surface-mounted for wind sensor

1.     - Do not mount the install RolloTec wind sensor in wind shadow. - Ensure correct attachment position

The wind controller is weather-resistant and can be exposed to constant direct sunlight.
The wind alarm has the top priority, i.e. the hanging is always aised and locked in the event of a wind alarm until the wind has dropped for at least 15 minutes.

Response time: Shutter is raised after 15 sec . above set value.

## RolloTec insert comfort with RolloTec precipitation sensor

With mounting angle for $70^{\circ}$ tilted mounting.

By connecting a precipitation sensor to extension unit input 2 in the event of precipitation the hanging (e.g. an awning) is retracted and locked shut until the precipitation stops (after approx. 2 minutes the moisture on the heated precipitation sensor has evaporated and it is unlocked).

RolloTec insert comfort

By connecting a thermostat insert, change-over to the extension unit inputs, the shutter is raised or lowered depending on the temperature (e.g. in a winter garden). Use only extension unit input $1 \mathbf{\nabla}$ or $2 \mathbf{\Delta}$ as desired.

RolloTec in combination with blind switch and controller/controller system

The key switch (blind switch 2pole) activates the controller/controller system, causing the shutters to be closed in the event of any unauthorised approach to the building. On arrival of the occupants, the roller shutters are raised by operating the key switch. A RolloTec timer can be used as a master control, automatically raising the roller shutters every morning while the occupants are away.

## Awning control with RolloTec wind/brightness and precipitation senso

```
Function: When the preset brightness is exceeded the
    shutter is lowered.
    In the event of precipitation and/or excessiv
    wind, the shutter is retracted and locked unt
    the precipitation stops and/or the wind drops.
Priority: Wind and rain before manual and brightness
    sensor command.
```

## RolloTec memory button

The memory button contains two functions: Push-button mode and automatic memory mode. Simply pressing the push-button (up/down) raises or lowers the shutter.
An up and/or down command can be taught-in and updated at any time by new ones. These commands are then executed automatically at the same time every day in memory mode.
When a manual action is performed in memory mode a short beep sounds indicating the set mode. (For settings see adjacent diagram)

| Technical data | RolloTec memory button |
| :--- | ---: |
| Switching times | max. 2 ( 1 up and 1 down time) |
| Connection | Plug into RolloTec insert |
| Order No.: | $1756 . ., 1757 .$. (with sensor connection) |

## RolloTec Easy timer

The RolloTec Easy timer can be viewed as a simple individual or master control for roller blinds, shutters or awnings. The timer can be programmed for one up time and one down time, for Monday to Friday and Saturday to Sunday respectively. The Easy timer can be programmed for a period of 6 hours after removal from the RolloTec insert. Manual operation is possible at any time, of course

The Easy timer does not process any extension and sensor signals or master commands
The RolloTec Easy timer comprises two modes:
Automatic: The programmed up/down time is executed automatically.
Manual: In this mode, the up/down time is ignored and operation is only possible manually using the up/down buttons.

## Programming

## RolloTec Easy timer

## Product details of the RolloTec timer comfort

- Operation via 4-button control pad
- Display the next time of movement with all active functions and the current time
- 3 programme memories $\triangle$, $B$ and $C$ for up to 18 times of movement
- Factory preset programmed times of movement in 2 programme memories ( $|\mathrm{A}, \mathrm{B}|$ )
- Random function (programmed times of movement are displaced by up to $\pm 15 \mathrm{~min}$.)
- Astronomical function (enables an automatic upwards movement of the shutter at daybreak and downwards movement at nightfall
- Adjusting the astronomical function by shifting the astronomical time $\pm$ hours.
- Random and astro functions can be combined
- Automatic summer / winter time changeover (can be switched off)
- Individual motor running time adjustable 1 sec . to 6 min .
- Blade positioning time adjustable 0.1 to 5 sec .
- Evaluation of extension units the down direction can be switched off (protection against being locked out)
- Power reserve approx. 4 hrs.
- Programmed times of movement saved in non-volatile memory. Date and time remain saved for about 4 hours maintenance-free due to use of special capacitor.
- Wind alarm connected via extension unit (only with the RolloTec insert with extension unit function)
- Additional product details of the RolloTec timer comfort with sensor connection
- Sunlight protection function (evaluates external and internal sensors)
- Separate running time adjustment when using external sensor
- Twilight function (twilight-related lowering of shutters in connection with brightness sensors, dawn-related raising of shutters only in connection with surfacemounted brightness sensor)
- Glass breakage function

RolloTec timer comfort display

| Technical data | Rollo Tec timer |
| :---: | :---: |
| Reversing time | min. 1 sec . |
| Accuracy | $\pm 1 \mathrm{~min}$. per month |
| Power reserve | approx. 4 hrs. (no battery required) |
| Switching times | max. 18 ( in 3 programme memories) |
| Random generator | $\pm 15$ minutes |
| Astro programme | Adjustable by $\pm 2$ hrs. |
| Running time programmable | 1 sec . to 6 min . (default 2 min .) |
| Connection | Plug into RolloTec insert |
| Operating temperature | 0 to $45{ }^{\circ} \mathrm{C}$ |
| Order No.: | 774.., 1775.. (with sensor connection) |

connection)

When a glass breakage sensor or combination of glass breakage sensor and sun sensor is fitted, a reduction in the power reserve should be expected

If a time of movement of 00:00 is set during programming, it is not executed. This means, for example, that by programming 7:00 $\mathbf{\Delta}$ and 00:00 $\mathbf{\nabla}$, the shutter is only raised in the morning. The shutter must then be lowered manually in the evening

Quick programming permits the up and/or down times to be entered speedily and efficiently. This makes programming the switching times even easier.
Press and hold down button $\mathbf{\Delta}$ and Prog simultaneously. The current time is stored as the up time for the current part of the week (Mo-Fr or Sa+Su, whichever is the case). If the button $\boldsymbol{\nabla}$ and the Prog. button are pressed simultaneously, the same is set for the down time.

Astronomic curve for RolloTec timer with adjustment for summer and winter time

## Programming the RolloTec timer comfort

Potential-free alarm contact and sabotage contact with
4 -stage sensitivity to enhance functional safety.

The alarm centre permits the setup of a low-cost alarm system using only wired components, e.g. to protect apartments or smaller properties.

| Technical data | Alarm system |
| :---: | :---: |
| Operating voltage | 230 V , 50 Hz or $12 \mathrm{~V}=$ |
| Current input | $10 \mathrm{~mA} \sim$ or $70 \mathrm{~mA}=$ |
| Emergency power supply | possible with Li battery pack: $14.4 \mathrm{~V}=$, order no.: 921401 |
| Output voltage for external devices | $12 \mathrm{~V}=$ |
| Fuse for outputs flashing light and siren | T 1.25 A L |
| Loading capacity of the 12 V outputs | max. 1 A |
| Load capacity of alarm, status outputs | max. 10 mA |
| Buzzer volume | 85 dBA at distance of 0.1 m |
| Pulse length for inputs | min. 0.4 sec . |
| Input switching | Closed < 4 kOhm Open > 100 kOhm |
| Siren duration | 0 to 180 sec., adjustable |
| Arm/alarm delay | 0 to 60 sec., adjustable |
| Operating temperature | 0 to $50^{\circ} \mathrm{C}$ |
| Index of protection | IP20 |
| Dimensions ( $\mathrm{W} \times \mathrm{H} \times \mathrm{D}$ ) | $165 \times 215 \times 48 \mathrm{~mm}$ |
| Order no.: | 9020 |

For individual connection wiring see continuous line.
For multiple connections open up at point | and wire (see dotted line).

- Burglar alarm systems are used to signal attempts to break in as early as possible. They supplement mechanical security measures.

All property protection is based on mechanical security measures such as strong doors and windows, additional bolts etc., which provide the greatest possible resistance against burglars.

- Burglar alarm systems should be installed in such a way that they detect and signal the attempts to break in, e.g. damage to doors and windows, as quickly as possible.
The control centre must be housed in a specially secured location.
- Burglar alarm systems must be installed in such a way that no false alarms are possible:
- Every false alarm weakens a security system as it loses credibility.
- False alarms can result in call-out costs.
- Measures for prevention of false alarms:
- Positive operation when armed, with alarm delay time: The alarm delay time means that, upon entering the property, you have time (adjustable between 0 and 60 seconds) to disarm the alarm centre before the alarm is triggered.
- Selecting the position of motion detectors: Motion detectors should not be directed towards heating or air-conditioning equipment, fax machines, automatic lights, windows or areas with strong air movement. Temperature differences in these areas can trigger an alarm.
- Passive glass breakage detectors on single glazing (these detectors are triggered when a coin is tapped against the window).
- All alarm system components accessible from outside must be protected against sabotage.
- Alarm sensors should be installed so as to be clearly visible but out of reach.
- Switching devices should be electronically protected against sabotage.

## Key switch magnetic contacts and glass breakage sensors at wired alarm centre

Relay for RolloTec and/or panic lighting at alarm centre

Free field definition

In every property in which the Radio Bus is to be installed there are favourable and unfavourable locations for the installation of appliances. In borderline cases the selection of the installation location can be decisive in determining the proper functioning of a radio link. Consequently, the following criteria should be taken into account in planning and installation:

Preconditions for measurement of the free field range

- level floor.
horizontal distance of interfering objects from any point along the straight-line
transmitter - receiver path $>20 \mathrm{~m}$.
- height of transmitter/receiver > 2 metres above the floor.
optimum alignment of aerial (stretched out straight).
damp ground.
- Penetration of radio signals

Material
Wood, plaster, unlaminated glass Brick, pressboard panels
Reinforced concrete
Metal, metal grilles, aluminium laminations Rain, snow

Penetration approx. 90 \% approx. 70 \% approx. 30 \% approx. 10 \% approx. 0-40 \%

■ The link between the transmitter and the receiver should be chosen such that it runs for as short a distance as possible through masonry or other attenuating materials. Wall niches, in particular, should be avoided

- The mounting height of transmitters and receivers should not be below 50 cm .
- The distance between transmitters and receivers should be at least 1 m and at least 10 cm between receivers.
- As far as possible all transmitter and receiver aerials should be aligned vertically or horizontally
- Do not shorten, extend or strip the aerials as they are precisely co-ordinated to the wavelength of the signal frequency.
- A minimum distance of 3 m should be maintained to radio components of other function groups, e.g. radio headphones or radio telephones.
- Computers, audio/video systems, microwaves or electronic transformers and ballasts are high-frequency interference sources. Maintain a minimum distance of 50 cm to these units wherever possible.
- Transmitters or receivers which handle centralised tasks building-wide (e.g. ALL OFF or central shutter control) should also be placed at a central location whenever possible. Unfavourable links running diagonally through the entire building should be avoided.
- If reception is irregular, it is often sufficient to move the transmitter or receiver by just a few centimetres. This reception interference often occurs due to partitioning, obliteration or reflection of the radio signal, as is familiar from car radios and mobile phones for example.

The distance to large metal surfaces, e.g. metal doors and frames, aluminium blinds or metal cupboards should be as large as possible (several decimetres).

- Do not install transmitters and receivers behind metallic or conductive surfaces, e.g. anti-static floor, insulation with metal laminating, cable lines, metal louvered ceilings, panels containing carbon fibres, hot water heaters, electric underfloor heating systems etc.
Remedy: If possible lead the aerial through the material.
- Windows with heat insulating glass based on metal insulation severely attenuate or reflect radio signals.
Damp in ceiling and walls, or snow in outdoor areas, severely attenuates or reflects radio signals.
- Radio reception can be checked at any time prior to installation using a transmitter and a receiver. The state of completion of the building should be taken into account, e.g. dryness of plaster and floor paving or presence of doors and cladding.
- To prevent superimposition of telegrams, radio actuators may not be used to actuate any other radio transmitters.
- Radio telegrams within a "radio zone" should only be repeated using a radio signal amplifier as otherwise telegram superimposition can occur.
The signal amplifier should be a minimum distance of 1 m from transmitters and receivers to prevent overloads.
- No more than 8 radio presence detectors should be used within a "radio zone" If there is constant presence in the detection range, the telegram frequency could result in telegram superimposition in the radio channel.
- The radio presence detector may only be operated with alkaline batteries, as they are the only ones with sufficient pulse current carrying capacity.
- The connecting cables for the radio push-button interface may only by extended to a maximum of 5 m using twisted pair cables with a cross-section of approx. $0.2 \mathrm{~mm}^{2}$ per channel.

## Radio signal amplifier

If a link is subject to a high degree of attenuation, or if the 100 metre radio range is insufficient, rendering transmission of the radio signals impossible, a radio signal amplifier can be installed at around half range as a repeater. It can amplify up to 60 transmission channels. All radio telegrams of the Radio Bus system are understood, but only the taught-in ones are amplified. Cascading of radio signal amplifiers is not possible. That is to say, radio signal amplifiers do not amplify radio telegrams from other radio signal amplifiers.

## Radio Bus control centre HM 1801

The unit is used as a radio control centre for all Radio Bus transmitters and actuators (except radio controller power pack and KNX radio receiver). The HM 1801 expands the radio installation, e.g. to include timer controlled and automated functions for lighting and shutter/awning control.
Radio Bus components can be actuated and linked. Data backup and any software updates are carried out using chip cards - additional connections permit future functions to be added.

## Functions

- Commissioning assistant
- Menu-driven operation with function keys
- Save and retrieve the last status by using the coming in/going out function.
- Easy operation and short messages via text-based illuminated display
- Accurate time controls with integrated radio clock (DCF77)
- Indication of time and room temperature
- Integrated Piezo buzzer with adjustable volume
- Key lock similar to mobile phone
- Save and load configurations/programmes using chip card
- Integrated radio signal amplifier function
- Transmitters and receivers can be taught in battery mode
- Emergency power supply
- Master functions such as ALL ON and ALL OFF (panic button)
- Switch and call up dimmer values
- Rapid selection of light scenes using number keys
- Easy configuration thanks to preset texts
- Teaching-in and testing of Radio Bus transmitters
- Battery low display for Radio Bus transmitters
- Lock and unlock radio control sections by time or radio transmitter
- Random time control, e.g. to simulate presence in building
- Time control for blind with running time setting
- Time-dependent controller monitoring
- Configuration lock for reprogramming using PIN

## Ranges/mounting location

\. Always follow the Radio Bus planning instructions!
The range always depends on the local conditions. When choosing the mounting location, ensure that the display can be read without glare and that there is a DCF77 reception.

Radio switch actuator

1 gang flush-mounted

Power supply unit $230 \mathrm{~V} \sim, 50 / 60 \mathrm{~Hz}$

Emergency power supply (batteries) $5 \times$ Micro Alkaline (LR 03)
Battery life approx. 6 hours in continuous operation without the mains Symbol flashing battery in display approx.

Transmission rangency
Transmisssion power
Ch3 M
433.42 MHz, (ASK)

RTTE $<10 \mathrm{~mW}$
(for EU and EFTA countries)
Number of channels
System radio codes
32 transmitters / 32 receivers
Signal amplifier
Integrated, max. 100 m , not cascadable
Mains cable H 03 VV-F, $2 \times 0.75$ gang flush-mounted

Display (initial display)

## Example of use: time-dependent controller monitoring

The garden lighting is to be operated by the controller after a particular time: Using the menu system in the display, specify a time as a condition in the HM 1801 linking function. In addition, set the delay time for the actuator.

Radio switch actuator Igang flush-mounted

## Mini hand-held radio transmitter

The Mini hand-held radio transmitter permits cordless remote control. When a key is pressed, an encrypted radio telegram is sent, which is understood by all the radio receivers in the Radio Bus system.

2 channels can be used for on/off, brighter/darker or up/down commands

| Technical data | Mini hand-held radio transmitter order no. 2769 |
| :--- | ---: |
| Power supply unit | $3 \mathrm{~V}=$ |
| Batteries | $1 \times$ lithium coin cell (type CR20 32) |
| Battery life | approx. 3 years |
| Transmission frequency | 433.42 MHz , (ASK) |
| Transmission range | max. 30 m (free field) |
| Transmission power | $<10 \mathrm{~mW}$ |
| R\&TTE approval (for EU and EFTA states) | Yes |
| Number of channels | 2 |
| Radio codes (assigned once per channel) | $>1$ billion |
| Operating temperature | 0 to $55^{\circ} \mathrm{C}$ |
| Dimensions ( $\mathrm{L} \times \mathrm{W} \times \mathrm{H})$ | $73 \times 40 \times 19 \mathrm{~mm}$ |

## Radio hand-held transmitters comfort

Radio hand-held transmitters permit cordless remote control. When a key is pressed, an encrypted radio telegram is sent which is understood and evaluated by all the radio receivers in the Radio Bus system.

Three groups (A, B, C) are available, each with 8 channels ( $1, . ., 8$ ), meaning 24 radio channels can be used for on/off, lighter/darker or up/down commands.

Touch functions are called up for on/off, brighter/darker or up/down commands or special functions "All Off" or "Light Scene".

With the radio hand-held transmitter comfort, 5 light scenes can be stored and retrieved.

A light scene may be composed of:

- fixed dimming value for lighting (approx. $10 \%$ to $100 \%$ brightness), and/or
- fixed switching state of a load (e.g. fan, light on/off), and/or
- fixed end position of a shutter (shutter up / down).

When using BLC dimmer inserts with BLC radio buttons, radio dimmers built-in or radio button control unit 1-10 V , the master dimming push-button is used to make an entire light scene lighter/darker or switch it off.

## Radio wall transmitter flat

The flat radio wall transmitter flat permits cordless, permanently installed remote control in electrical installations.

When a key is pressed, the flat transmitter sends an encrypted radio telegram, which is understood and evaluated by all the radio receivers in the Radio Bus system.

The keys can operate in pairs as rockers (for on/off, brighter/darker or up/down commands) or activate special "All Off" or "Light Scene" functions.

The Radio wall transmitter flat is fitted with a 4gang function switch " S ", which is used to select the push-button function and to save the light scenes (see illustration).

The Radio wall transmitter flat can be screwed or stuck to a flat base (wood plaster, glass, mirror etc.) as well as to appliance sockets with a frame. When fitting on glass, adhesive foil order no. 9498 xx xx can be fitted to the backside as a sight screen.

| Technical data Radio wall tr | ter flat order no. 2721.., 2722.., 2724.. |
| :---: | :---: |
| Power supply unit | $3 \mathrm{~V}=$ |
| Battery | 1 x lithium coin cell (type CR20 32) |
| Battery life | approx. 3 years |
| Repeated flashing of all LEDs when transmitting | battery flat, replace |
| Transmission frequency | 433.42 MHz, (ASK) |
| Transmission range | max. 100 m (free field) |
| Transmission power | $<10 \mathrm{~mW}$ |
| R\&TTE approval (for EU and EFTA states) | Yes |
| Number of channels | 1,2,3 or 4 depending on the type |
| Radio codes (assigned once per channel) | $>1$ billion |
| Light scenes | 1,3 or 5 depending on setting and type |
| Operating temperature | 0 to $55^{\circ} \mathrm{C}$ |
| Index of protection | IP20 |

## Radio transmitter insert wall-mounted

The Radio transmitter insert wall-mounted permits cordless but permanently installed remote control in electrical installations. It can be operated in combination with KNX/EIB push-buttons (1, 2 or 4gang) of the MODUL 2, S.1, B.1, B.3, B.7, Q.1, Q.3, K.1, K. 5 and ARSYS ranges.

When a key is pressed, the Radio transmitter wall-mounted sends an encrypted radio telegram, which is understood and evaluated by all the radio receivers in the Radio Bus system

The keys can operate in pairs as rockers (for on/off, brighter/darker or up/down commands) or activate special "All Off" or "Light Scene" functions.

The Radio transmitter wall-mounted is fitted with a 4 gang function switch "S", which is used to select the push-button function (see illustration).

The Radio transmitter wall-mounted can be installed in flush-mounted wall boxes, cavity wall sockets or flat surface-mounted housings with frames.

To achieve the maximum transmission range, the aerial should be exposed and fully stretched out, and be as far as possible from the wall-mounted radio transmitter.

## Radio transmitter insert wall-mounted

Flush-mounted installation
 In flat surface- $\quad\lfloor$ instructions must be mounted frame
 followed.

Repeated flashing of all LEDs when transmitting batteries flat, replace
Operating temperature 4 to $55^{\circ} \mathrm{C}$

## Radio transmitter 2gang flush-mounted

The Radio transmitter 2gang flush-mounted is used to expand existing installations by permitting the wireless transmission of switching, pushing, dimming and shutter commands. The radio telegram is understood and evaluated by all the radio receivers in the Radio Bus system. The Radio transmitter 2gang flush-mounted has 4 operating modes:
Mode A: 2-channel dimming single-surface operation (toggling), application: series dimmers
The Radio transmitter 2gang flush-mounted sends one dimming/toggle command per channel, with a series push-button with 2 NO contacts for example.
Short actuation (<1s): switch on/off
Long actuation (> 1 s ): brighter/darker
Note: the telegram type (on/off, brighter/darker) is toggled in the transmitter. The Radio transmitter 2gang flush-mounted may therefore have to be actuated twice in order to obtain the desired reaction after it is been operated on the receiver or by a different transmitter.
Mode B: 2-channel switching; application: series switch
The Radio transmitter 2gang flush-mounted sends each channel a switch-on command when the voltage is connected, and a switch-off command when it is disconnected. Activation e.g. by: series switch $=$ series switching. If activated by a time switch, a presence can be simulated.
Mode B: 2-channel switching; application: push-button/bell operation
The Radio transmitter 2gang flush-mounted sends an ON command when the push-button (NO contact) is pressed and an OFF command when it is released. Note: This operating mode is not suitable for activation of radio push-button actuators.
Mode C: 1-channel dimming double-surface operation
Application: 2-push-button dimmer
The Radio transmitter 2gang flush-mounted sends on/off dimming telegrams
(brighter/darker) for one channel. Activation: e.g. series switch with 2 NO contacts
Actuation: E1 < 1 s : switch on
E1>1s: brighter
E2 < 1 s: switch off E2>1s: darker
Note: a long actuation (> 1 s ) when the load is switched off causes switching on to minimum brightness (night light).
Mode D: 1 channel blind double-surface operation
Application: blind control
The flush-mounted radio transmitter with L conductor sends up/down shutter telegrams (short-term/long-term mode) for one channel.
Activation: e.g. by RolloTec insert
Activation: E1 > 1 s: Slat adjustment Up
$\mathrm{E} 1<1$ s: move Up (2 min)
E2 > 1 s: Slat adjustment Down
E2 < 1 s: move Down (2 min)
Note: The Radio transmitter 2gang flush-mounted must not be connected in parallel to a blind motor.

## Radio push-button interface 4gang flush-mounted

The Radio push-button interface 4gang flush-mounted upgrades an existing installation by cordless transmission of dimming, switching, shutter control and light scene commands. Inputs E1-E4 are activated via potential-free switching and/or push contacts. The radio telegram is understood and evaluated by all the radio receivers in the Radio Bus system.
Activation: switches; application: 2 series switches
The Radio push-button interface 4gang flush-mounted sends a switch-on command to each channel when the switch is closed and a switch-off command when it is opened. Activation e.g. by 2 series switches produces 2 series connections.
The special "bell operation" function is possible with a push-button.
Activation: push-buttons; application: 4gang push-button or TS system. The Radio push-button interface 4gang flush-mounted sends the switching, dimming, shutter control or light scene commands for channels depending on the DIP switch setting (see table).

## BLC radio button

The lighting can be switched on/off manually at the radio button or via a radio transmitter with BLC switch inserts, and it can also be made brighter/darker with BLC touch dimmers. The desired switch-on brightness can be stored in touch dimmers, and is retrieved for every switch-on command (memory value).

Light scene operation is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface 4gang flush-mounted and HM 1801. If light scenes are assigned (taught-in) to the BLC radio button, the desired brightness value in BLC touch dimmers and the switching state in BLC inserts can be stored and set when a light scene is called up.

Pressing the ALL OFF / ALL ON push-button on a taught-in hand-held radio transmitter, a radio wall transmitter or the radio push-button interface 4gang flush-mounted and HM1801 switches the load on or off.

When a radio signal is received by the radio controller, it is switched on for approx. 1 minute (retriggering), and in BLC touch dimmers the memory value is set.

## Radio universal dim actuator flush-mounted

The lighting can be switched on/off manually on the device or via radio transmitter, and dimmed via radio transmitter.
The desired switch-on brightness value can be saved, and is called up with every switch-on command (memory value).

The radio hand-held transmitter comfort, radio wall-transmitter, radio push-button interface, 4gang flush-mounted and HM 1801 can be used for light scene operation If light scenes have been assigned (taught) to the radio universal dimmer flush-mounted, then the desired brightness value can be saved, which is set when a light scene is called up.

Pressing the ALL OFF button/ALL ON button of a taught radio hand-held transmitter, radio wall transmitter, radio push-button interface, 4gang flush-mounted and HM 1801 causes the load to be switched off/on.

When a taught radio signal of the radio controller is received, the memory value is set for approx. 1 min . (retriggering).

| Technical data |  |

| Power supply | 230 V , 50/60Hz |
| Connected load $\quad$230 V <br> cut-off | 230 V incandescent lamps and halogen lamps 50-210 W (ohmic, phase cut-off) Tronic transformers 50-210 W (capacitive, phase cut-off) or conv. transformers (loaded < $85 \%$ ) incl. transformer power dissipation 50-210 VA (inductive, phase cut-on) Mixed loads, capacitive and inductive loads may not be mixed! |
| Dimming principle | Phase cut-on or cut-off according to load type |
| Power consumption, standby | approx. 0.63 W |
| Switching on | bulb-preserving soft start |
| Noise generation | very low noise |
| Reception frequency | 433.42 MHz, (ASK) |
| Teachable radio transmitters | 30 |

## Radio universal dim actuator for connector

The lighting can be activated on the device manually or using the radio transmitter. It can be dimmed using the radio transmitter. The desired switch-on brightness can be stored in touch dimmers, and is retrieved each time a switch-on command is given (memory value).

Light scene operation is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface, 4gang flush-mounted and HM 1801. If light scenes are assigned (taught-in) to the radio adapter universal dimmer, the desired brightness value can be stored and set when a light scene is called up.

Pressing the ALL OFF/ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface, 4gang flush-mounted and HM1801 switches the load on or off.

When a taught-in radio signal is received by the radio controller, the memory value is set for approx. 1 minute (retriggering).

Radio 1-10 V control unit built-in
The lighting can be activated on the device manually or using the radio transmitter, and made brighter/darker. The desired switch-on brightness can be stored in touch dimmers, and is retrieved each time a switch-on command is given (memory value).

Light scene operation is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface, 4 gang flush-mounted and HM 1801. If light scenes are assigned (taught-in) to the radio $1-10 \mathrm{~V}$ control unit built-in, the desired brightness value can be stored and set when a light scene is called up.

Pressing the ALL OFF / ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface, 4gang flush-mounted and HM1801 switches the load on or off.
When a radio signal is received by the radio controller, the memory value is set for approx. 1 minute (retriggering).

For dimensioning of switching power and control current, see Technical Information, $1-10 \mathrm{~V}$ devices.

| Technical data |  |
| :--- | ---: |
| Power supply unit | $230 \mathrm{~V} \sim, 50 / 60 \mathrm{~Hz}$ |
| Standby power consumption | approx. $1,22 \mathrm{~W}$ |
| Control voltage | $1-10 \mathrm{~V}$ |
| Max. control current | 15 mA |
| Switching contact; Ohmic load; | Relay; 1800 W ; type-dependent |
| Electronic ballast, transformer | approx. 12 single-lamp-, 6 two-lamp electronic ballasts |
| Reception frequency | 433.42 MHz , (ASK) |
| Radio transmitter with teach-in facility | 30 |
| Radio codes (assigned once per channel) | $>1$ billion |

## Radio switch actuator built-in

In conjunction with taught-in radio transmitters, the Radio switch actuator built-in enables network-operated devices to be switched remotely. It switches electrical loads ( $230 \mathrm{~V} / 10 \mathrm{~A}$ ) as soon as it has received a corresponding (taught-in) radio signal. The Radio switch actuator built-in can be operated via a BLC extension set or a push-button (NOC) as an extension unit.

Light scene operation (switching only) is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or radio push-button interface, 4gang flush-mounted and HM 1801. If a light scene is assigned (taught-in) to the radio switch actuator, a desired switching state (On/Off) can be stored and set when the light scene is called up.

Pressing the ALL OFF / ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface, 4gang flush-mounted and HM1801 switches the load on or off.

When a taught-in radio signal is received by the radio controller, it switches on for approx. 1 minute (retriggering).
The special "bell operation" function is possible in conjunction with the radio transmitter 2gang flush-mounted or radio push-button interface, 4gang flush-mounted.

Conv. transformers ( $\geq 85 \%$ loading) incl. transformer power loss 1000 VA (inductive) Fluorescent lamps uncomp. 1200 VA, parallel comp. with $47 \mu \mathrm{~F} 920$ VA (induktive) Duo circuit 2300 VA (induktive)
Mixed load; capacitive and inductive loads should not be mixed Any number of BLC extension units or push-buttons (NOC)
Number of extension units Standby power consumption

## Radio switch actuator 1gang flush-mounted

In conjunction with taught-in radio transmitters, the radio switch actuator 1 gang flush-mounted enables network-operated devices to be switched remotely.

Light scene operation (switching only) is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface, 4gang flush-mounted and HM 1801. If a light scene is assigned (taught-in) to the switch actuator, a desired switching state (On/Off) can be stored and set when the light scene is called up.

Pressing the ALL OFF/ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface, 4gang flush-mounted and HM1801 switches the load on or off.

When a taught-in radio signal is received by the radio controller, it switches on for approx. 1 minute (retriggering).

The special "bell operation" function is possible in conjunction with the radio transmitter 2gang flush-mounted or the radio push-button interface, 4gang flush-mounted.

Radio Bus System RMD

## Radio switch actuator 2gang flush-mounted

In conjunction with taught-in radio transmitters, the radio switch actuator 2gang flush-mounted enables network-operated devices to be switched remotely.
The radio switch actuator 2gang flush-mounted is especially suitable for installation of a series connection from an existing switch-off without additional cable.
Light scene operation (switching only) is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface, 4 gang flush-mounted and HM 1801. If a light scene is assigned (taught-in) to the radio switch actuator 2 gang flush-mounted, a desired switching state (on/off) can be stored and set when the light scene is called up.
Pressing the ALL OFF / ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface 4 gang flush-mounted and HM1801 switches the load on or off.
When a taught-in radio signal is received by the radio controller, it switches on for approx. 1 minute (retriggering).
The special "bell operation" function is possible in conjunction with the radio transmitter 2gang flush-mounted or the radio push-button interface 4gang flush-mounted.

| Technical data |  |
| :---: | :---: |
| Nominal voltage | $230 \mathrm{~V} \sim, 50 / 60 \mathrm{~Hz}$ |

| Standby power consumption | approx. 0.37 W |
| Reception frequency | 433.42 MHz, (ASK) |

## Radio switch actuator for connector

The Radio switch actuator for connector in conjunction with taught-in radio transmitters permits remote switching of mains powered appliances (e.g. standard lamp, table top lamp, ventilator fan, stereo system etc.) with a mains plug.

Light scene operation (switching only) is also possible with the radio hand-held transmitter comfort or radio wall transmitter, or the radio push-button interface 4 gang flush-mounted and HM 1801. If a light scene is assigned (taught-in) to the switch actuator, a desired switching state (on/off) can be stored and set when the light scene is called up.

Pressing the ALL OFF / ALL ON push-button on a taught-in hand-held radio transmitter comfort, a radio wall transmitter or the radio push-button interface 4gang flush-mounted and HM1801 switches the load on or off.

When a taught-in radio signal is received by the radio controller, it switches on for approx. 1 minute (retriggering).

The special "bell operation" function is possible in conjunction with the radio transmitter 2gang flush-mounted or the radio push-button interface 4gang flush-mounted.

## Radio blind actuator flush-mounted

In conjunction with taught-in radio transmitters, the radio blind actuator enables network-operated devices to be switched remotely.
Pressing a radio transmitter push-button $<1 \mathrm{sec}$. adjusts the blinds; > 1 sec . sends the drive into continuous operation for 2 minutes. It is particularly well suited to setting up a master and/or group control system from existing individual controls without additional wiring. They are flush-mounted in junction boxes, wall boxes, or in water-tight junction boxes in the shutter unit.

Light scene mode (end positions only) is possible with the radio hand-held transmitter comfort, the radio wall transmitter or the radio push-button interface 4gang flush-mounted and HM 1801. If a light scene is assigned (taught-in) to the radio blind actuator flush-mounted, the desired end position (open/closed) of the blind can be stored and set when the light scene is called up.

Integration into the All OFF / ALL ON function (end positions only) is also possible.

| Technical data | $230 \mathrm{~V} \sim, 50 / 60 \mathrm{~Hz}$ |

Upgrade possible with RolloTec and Radio Bus with existing 230 V cable in roller shutter unit. Group/master contro

In many properties, a 230 V cable has been laid in the roller shutter unit in the course of renovation work To then implement a control system, the following installation variant is possible: Install a radio blind actuator flush mounted in a water-proof connection box in the roller shutter box. Control of the roller shutter can be achieved by teaching-in the radio wall transmitter and/or radio hand-held transmitter to the radio blind actuator. Master control can be easily implemented with the radio transmitter 2gang flush-mounted e.g. in combination with a RolloTec timer (recommended: wall box flush-mounted). This transmitter is taught-in to any radio blind actuator in the roller shutter box. Prior to installation the radio signal
range should be tested.

RolloTec standard insert with RolloTec radio button and radio blind actuator: master and group control by radio

The Radio Bus planning instructions must be followed

The radio transmitter wall-mounted as a group control and the Radio transmitter 2gang
flush-mounted as a central control are taught-in to the allocated individual controls (radio buttons)
and radio blind actuators.
The group and master control commands are transmitted by radio signal.

## RolloTec radio button

The radio button is a component of the RolloTec system. In conjunction with the RolloTec insert, it permits remote and manual operation of a tubular motor.

The $\boldsymbol{\Delta}$ button raises the shutter, the $\boldsymbol{\nabla}$ button lowers it.
The system can be controller using a radio hand-held transmitter, radio wall transmitter, radio push-button interface 4gang flush-mounted, radio switch actuator 2gang flush-mounted and HM 1801.

If a light scene is assigned (taught-in) to the button, a desired end position (open/closed) of the blind can be stored and moved to when the scene is called up.

| Technical data | RolloTec radio button order no. 1758.., 1759,. <br> Power supply unit <br> from RolloTec insert 2911, 2925, 2975, 2975 01 |
| :--- | ---: |

| Reception frequency | 433.42 MHz , (ASK) |
| Radio transmitter with teach-in facility | 30 |
| Radio codes (assigned once per channel) | $>1$ billion |
| Distance from transmitter in teach-in mode | 0.5 to 5 m |
| R\&TTE approval (for EU and EFTA states) | Yes |
| Change-over time on change of direction | approx. 1 sec |
| Light scenes (only end positions) | 5 |
| Operating temperature | 4 to $55^{\circ} \mathrm{C}$ |
| Index of protection | IP20 |

For connection to master, group and individual control see RolloTec.

Examples of combination options for radio presence detectors surface-mounted and Radio Bus components

## Radio presence detectors surface-mounted in an office

! Do not mount radio presence detector surface-mounted in the immediate vicinity of lights or ventilator fans.

May only be operated with alkaline batteries, as they are the
only ones with sufficient pulse current carrying capacity.
The Radio Bus planning instructions must be followed.

Radio presence detectors surface-mounted can only be taught into radio actuators version R2 or higher; a corresponding R2 designation is printed on the device.
As soon as a radio presence detector surface-mounted has been taught into a radio actuator, the corresponding actuator internally switches to light control mode and changes its behaviour.

Switching on by a brief press (>1s) locally or by radio control initially switches the associated actuator on for 2 minutes.
If no presence is detected during this time, it is switched off again.
Switching off by a brief press (>1s) locally or by radio control initially switches the associated actuator off for 2 minutes. During this time, switching on is prevented by presence detection and is only possible manually (e.g. for slide show).

With a dimming actuator (e.g. BLC universal touch dimmer insert with BLC radio button, Radio universal dim actuator built-in, Radio 1 - 10 V control unit built-in etc.) a constant light control system can be set up. In this case, the target brightness value set on the radio presence detector surface-mountedis compared with the actual value and evaluated in the dimmer.

On dimming actuators, the brightness can be changed by holding down the local or radio buttons, similar to a normal dimming operation
The brightness value determined is temporarily used as the target brightness value until the next switch off, i.e. the radio presence detector surface-mounted attempts to keep this new value constant

Only one switch on or off is possible in conjunction with radio switch actuators. To prevent the occurrence of light oscillation (device constantly switches on and off) it may be necessary to increase the target brightness value by turning the brightness adjuster on the radio presence detector surface-mounted towards the symbol sun.
In general, the radio presence detector surface-mounted should not be installed too close to lamps, to minimise this effect. The brighter the lamp to be switched on is, the more significant the effect described above.

## Radio controller surface-mounted

The radio controller surface-mounted with integral brightness measurement allows the extension of existing installations by wireless transmission of switching commands. On detecting movement, the radio controller surface-mounted sends an encrypted radio-telegram, which is understood and evaluated by all radio receivers in the radio bus system.

The radio controller surface-mounted is provided on the backside with two potentiometers, allowing the response sensitivity and activation brightness to be set.
Setting the activation brightness:

- Position • brightnescindependen
- Adjustment range approx. 1 to 80 Lux
- Position corresponds to approx. 80 Lux.

This setting should be selected when using the radio controller power section; the activation brightness and the delay time can be set at the power section.

In connection with other radio bus receivers (BLC radio buttons, radio switch actuator for connector adapters and radio switch actuator built-in/flush-mounted etc.) the controller triggers switching the load on for 1 minute (retriggering).

The radio controller surface-mounted can be screwed or stuck to a flat surface (wood, plaster, glass, mirror etc.) as well as to appliance sockets with a frame.

## Radio controller/system

The radio controller system is a cordless system, and is particularly suitable for upgrading existing installations. A maximum of 30 radio controllers can be taught-in to a radio controller power unit surface-mounted. The radio controllers can also be taught-in to other Radio Bus receivers (BLC radio button, rradio switch actuator for connector and radio switch actuator built-in/flush-mounted etc.), where they activate the load for 1 minute (retriggering). A radio controller can be taught-in to any number of radio receivers. The response sensitivity of each radio controller unit can be adjusted to varying detection conditions. A push-button, NC contact in the lead of the radio controller power pack surface-mounted can be used to activate additional functions. These functions can also be used with a taught-in hand-held or wall-mounted radio transmitter as follows
Short press of button $\boldsymbol{\wedge}$ ON for preset time
Short press of button $\mathbf{V}$ OFF (automatic mode remains active)
Long press of button (>1sec.) ^ ON for 2 hours
Long press of button (>1sec.) V OFF for 2 hours

Schuko socket with RCD protection switch/ RCD protection switch

SCHUKO socket outlet with RCD protection switch / RCD protection switch
The SCHUKO socket outlet with RCD protection switch and the RCD protection switch must be used anywhere that the use of residual-current protective devices according to VDE 0664 is specified
According to DIN VDE 0100-410: 2007-06, alternating current systems must be provided with additional protection by means of residual-current protective devices $\geq 30 \mathrm{~mA}$. This applies to socket outlets with a rated current not greater than 20 A that are intended for use by non-experts and for general use.
Exceptions are socket outlets that are constructed exclusively for connecting a specific piece of equipment, and socket outlets that are monitored with a residual-current monitor (RCM) by qualified electricians or persons with electrotechnical training, such as in one's own commercial or industrial systems, for example. The protection goal "Protection against direct contact" according to DIN VDE 0100 Part 410 is achieved. Socket outlets connected to the residual-current protected outgoing terminals (outgoing feeders) are likewise protected. Thus all loads connected to it are equipped with additional protection according to DIN VDE 0100 Part 410. Triggering is ensured in the event of AC fault currents, and pulsating DC fault currents $\geq 30 \mathrm{~mA}$. The test button "T" can be used to test the electrical and mechanical functioning. The integrated switch lever can be used to switch the SCHUKO socket outlet with RCD protection switch and the RCD protection switch on again after triggering (when testing or after eliminating the fault).

## Antenna technology terms

Tap: for connecting one or more branch cables to a continuous trunk cable. The level of the branched signal is dependent on the attenuation of the branch.
ADR (Astra Digital Radio): digital audio radio programmes on a subcarrier analog TV transponder. Azimuth: azimuth means the alignment of the south-facing satellite aerial (horizontal angle) Band: band denotes a frequency range between two specified values.
Ku-Band: satellite transmission frequency band
SAT-bands: (SAT-IF, Input-IF) intermediate frequency bands used by satellite receivers:
$950-1,750 \mathrm{MHz}$ (standard band)

## 950-2,050 MHz (extended band)

$700-2,050 \mathrm{MHz}$ (further extended band)
High band frequency range 11.7 to 12.75 GHz of a satellite. Here mostly only digital
programmes are broadcast.
Low band frequency range 10.7 to 11.7 GHz of a satellite. Systems with older LNBs cannot receiver the whole range of the band (typically only 10.950 to 11.7 GHz analog).

## CATV bands

Band I (VHF), channel 2-4
Band II (UKW), frequency 87.5-108 MHz
USB Band, Lower Special Channel Range (VHF), channels S2 - S10
Band III (VHF), channels 5-12
OSB Band, Upper Special Channel Range (VHF), channels S11-S20
Hyperband (VHF), channels S21-S38
Bands IV and V (UHF), channels 21-69
Bandwidth: expression for a range of frequencies contained with a specific band.
BER (Bit error rate): denotes the quality of a data signal after it has been receives and demodulated. The lower the rate, the better the signal
CATV: abbreviation for Community Antenna Television. Reception of radio and TV programmes using a community aerial. Used internationally in cable TV networks as cable television or broadband cable networks.
Conditional Access (CA) System: controls the access by users to services and programmes which are encrypted for copyright or commercial reasons.
Common Interface (CI): uniform interface for digital set-top boxes for PCMCIA modules with card readers for smart-card by practically all Pay-TV companies.
DAB (Digital Audio Broadcasting): designation for digital radio. The system offers additionally capacity for data transmission. Data compression is carried out using MPEG-2.
Data Rate: data bits transmitted per second. Is expressed in kbit/s or Mbit/s. The higher the data rate the better the transmitted signal.
Data Reduction: compression of image and sound signals. Redundant information is left out.
Attenuation loss: measurement in dB (decibel) resulting from the cabling and components.
Attenuation adjustment: to compensate for the frequency-dependant cable attenuation
dB - decibel: value often used to express the attenuation of a cable or a stage, or also the gain of an amplifier, aerial etc.
d-box: digital set-top box for Premiere World.
DiSEqCTM (Digital Satellite Equipment Control): Switching signal generated by the satellite receiver, for controlling and switching LNB and multi-switches. This allows several satellite positions for rotary and multi-feed systems to be controlled. DiSEqC is a trade mark of the European Satellite Organization (EUTELSAT) and arose out of cooperation between EUTELSAT and Phillips.
Dolby Digital Sound Processing: this enables a digital surround sound to be reproduced in a home cinema system.
Pass-through attenuation: reduction in the signal level at each output, e.g. at distributors, aerial sockets etc.
DVB (Digital Video Broadcasting): transmission of video and sound signals in digital form. DVB-S stands for satellite cable transmission, DVB-T for terrestrial cable transmission and DVB-C for cable transmission.
Single-cable system: matrix for distributing 1.SAT-ZF satellite programmes using a cable network in a tree structure.
Elevation: by elevation is meant the vertical angle (inclination) of the aerial
EPG (Electronic Programme Guide): electronic program guide
Decoupling attenuation (directional attenuation) attenuation of the output sockets relative to each other
FEC (Forward Error Correction): a technique for reducing the error rate in a data transmission. Additional bits are inserted into the data stream so that error correction algorithms can be used on reception.
Field strength meter: an instrument used by technical staff to measure the signal strength of a radio or TV channel. The same instrument can be used for precise alignment of the aerial so that the maximum signal strength is achieved and for the checking the signal level at connections to community systems.
Free-to-Air: free-to-air receivers receive exclusively free (non-encrypted) programmes,
Gain: unit of measurement expressed in dB for the amplification capabilities of a parabolic aerial or an amplifier. Gain is the opposite of attenuation. The gain of an aerial depends on the diameter of the parabolic mirror and its efficiency. The larger the better!
Coaxial cable: shielded cable with inner and outer conductor, insulated from each other by a material (solid PE / cellular PE), which ensures a very small signal loss. The outer conductor (shield) serves to protect the inner conductor against external interference, and thus minimises the signal loss on the inner conductor. Cable recommendation for satellite reception: low attenuation approx. $27 \mathrm{~dB} / 100 \mathrm{~m}$ at $2,000 \mathrm{MHz}$ and shielding class $>90 \mathrm{~dB}$ (class A ).
LNB - Low Noise Block converter: a feed system also known as LNC. Reception unit at the focus of the parabolic mirror, which converts the high-frequency satellite downlink into a 1.Sat intermediate frequency suitable for the receiver. The main distinctions are:
Single Universal LNB for 1 subscriber high band and low band
Twin Universal LNB for 2 subscribers (twin receiver) high band and low band
Quattro Switch LNB for 4 subscribers high band and low band
Quattro Switch LNB with 1 terrestrial input for 4 subscribers high band, low band and terrestrial Quattro Universal LNB for multi-switch with 4 outputs (horizontal/vertical/high band/ ow band) Octo Switch LNB for 8 subscribers high band and low band
LNB Skew (LNB Tilt): LNB Skew denotes the rotation of the LNB in relation to its vertical position in the bracket. This allows precise positioning of the LNB to obtain the best possible reception quality (e.g. in Germany $42^{\circ}$ East is required for Tüksat)
LOF (Local Oscillator Frequency): stated in MHz or GHz, varies depending on the LNB and reception frequency range. In the Ku band the relationship is: transmission frequency of the satellite - LOF = receiver reception frequency

MPEG-2: data compression process for images and sound. In contrast to conventional analog technology (where 25 full images with all information are transmitted per second) the MPEG process deals with only the actual changes in the image
Multi-feed: a technique that allows reception of multiple satellites using one a single fixed aerial. Multi-switch: conventional distributors are insufficient to distribute satellite signals. Each subscriber must be able to switch between different reception levels, frequency ranges and even different satellites. Only by this means is reception of all programmes possible. For this, an electronic changeover switch is required, which is called a multi-switch (up to 100 subscribers). Many models also allow a feed of conventional terrestrial programmes. When receiving from 2 or more satellites the DiSEqC switch is required, which controls multi-switches and also receivers. Network Search: some transponders receive within the digital data stream a list with the data for other transponders, so as for example to facilitate a search for all programmes of a provider, which may occupy several transponder frequencies. Data transmitted in this way are however often incorrect or incomplete.
Aperture angle: the aperture angle of a SAT aerial can be regarded as denoting the "angle of view" of the SAT aerial towards the satellite. It is expressed in degrees and depends on the design and size of the SAT aerial. To prevent interference from nearby satellites it is recommended that he aperture angle should where possible be less than 3 degrees. SAT aerials of diameters from 60 cm offer this capability.
ist of the most used designs for parabolic mirror satellite (reception) aerials. Concentrates the electromagnetic waves in the feed system (LNB).
Signal Level Adjuster: for reducing levels that are too high (cable equalisation)
Polarisation: this is plane of the electrical components of an electromagnetic wave (direction of oscillation). For satellite transmission two different planes are used: the horizontal and the vertical (linear polarisation), the better to exploit the frequency spectrum.
The system is based the bands for two adjacent channels being positioned so they partially overlap each other. The interference that could result is prevented by polarising the two channels in different planes.
QAM (Quadrature Amplitude Modulation): digital modulation process with phase shift keying, used for transmission in cable networks.
QPSK (Quadrature Phase Shift Keying): digital modulation process used for satellite transmission Return Channel: projected interactive applications such as home shopping or Internet access require a return channel. This can for example be provided by a modem incorporated within the digital receiver.
SMATV (Satellite delivered Master Antenna Television System): communal system that has been extended for the reception of satellite signals.
SR (Symbol Rate): parameter that must be entered to allow manual searching of the receiver e.g. 22000, 27500)

Terrestrial: denotes all radio services on the surface of the earth with the exception of space and astronomical broadcasting. A "normal" (terrestrial) domestic aerial can receive TV and radio programmes.
Tone-Burst: a type of Mini-DiSEqC has been defined as an economical way of extending old systems to a wider circuit configuration (in addition to 14/18 Volt and 22 kHz ). This is often eferred to as Simple DiSEqC or as Tone-Burst. This merely modulates a sequence of bits "0 satellite A) or "1" (sateliite B) to the 22 kHz signal. The Tone-Burst signal was developed to permit simple changing over between two LNBs and is suitable for controlling relays (two inputs at one output) and for the new Monoblock LNB. For SAT position A the 22 kHz signal is sent continuously, for SAT position B it is pulsed. A Tone-Burst signal lasts for about 12.5 ms .
ransponder frequency containing multiple channels. In analog systems a TV program and multiple sound channels can be transmitted for each transponder. In digital systems (QPSK) is the transmission capacity is 6-10 TV programmes with sound channels.
Carrier: wave at very high frequency, which by means of modulation is able to convey a radio or TV signal over a very great distance.
Carrier/Noise: describes the signal quality of the aerial that is forwarded to the receiver. (also $\mathrm{C} / \mathrm{N}$ ratio). The $\mathrm{C} / \mathrm{N}$ ratio is measured in dB and must always be above the threshold level ( $>6 \mathrm{~dB}$ ) of he receiver.
Twin-Receiver: satellite receiver with two separate independent reception components in one box (e.g. for independent connection of a TV receiver and a video recorder)
Triple play capability to use broadband cable for broadcasts (television), telephone and Internet. win receiver satellite receiver with two separate, independent receivers in a single housing (e.g. or independent connection of a TV receiver and a video recorder).
USB-Box: external box which is connected to the PC through the USB port (Universal Serial Bus). This external box allows digital radio and TV programmes, and also multi-media services to be received by satellite.
Power Supply: the satellite receiver supplies the LNB with power via the coaxial cable
The voltage of the supply also determines which polarisation plane is returned by the LNB 14 Volt = vertical, 18 Volt $=$ horizontal polarisation planes.
Distributor: for distributing the energy of an incoming main trunk cable into two or more trunk cables.
Amplifier: for increasing the aerial signal level
Video bit rate: quantity of data transmitted per second by a digital video signal.
Switch: for combining or splitting frequency ranges and individual channels.

## Instructions for coaxial cables

Stripping length for
$r>5 \times d$
The bending radius " r " of the cable for a one-time load must
not be less than 5 x the cable diameter " d ". $(r>5 \times d)$
|d|

## Attenuation types

Transmission loss
Attenuation for through-sockets Attenuation for through-sockets
between trunk input and trunk output

Attenuation
For through-sockets and single sockets.Attenuation between

## Cabling structures

Tree structure O Star structure $\mathrm{O}-\mathrm{O}$ Floor star structure ure 0

Decoupling internal Attenuation between plug

Directional attenuation Attenuation between trunk output out and the output sockets

Decoupling
Attenuation between two
aerial sockets.

## Planning recommendations

Terminal boxes have no decoupling, and are always branched with splitters. The connection at a branch is also called a spur, and only here can a terminal box be connected. At the through passage of a splitter, on the other hand, only through-sockets or other splitters may be connected. Distributors (too little decoupling) only throughsockets can be connected, because only in this manner will the de-coupling be sufficient. The last
through-socket must be terminated with a 75 ohm terminating resistor.
Noise factor $\mathrm{C} / \mathrm{N}$
The signal-to-noise ratio is the ratio, expressed in decibels, of the signal power to the noise power The noise factor indicates how much smaller the signal-to-noise ratio at the output of an active module (e.g amplifier) is than the signal-to-noise ratio at the input.

| Signal-to-noise ratio | Noise | picture quality |
| :---: | :---: | :---: |
| $<46 \mathrm{~dB}$ | not visible | very good |
| 37 dB | visible, but not annoying | good |
| 30 dB | clearly visible, annoying | unsatisfactory |
| $<26 \mathrm{~dB}$ | outweighs | unusable |

- LCD, plasma and 100 Hz televisions need larger signal-to-noise ratios for a visually less noisy picture
( 50 dB ). The level should not exceed 74 dB .
- Install splitters and distributors in accessible space
- Install coaxial cables in ductwork systems
- Observe bending radii of the coaxial cables
- Install amplifiers in dry spaces with their own power supply
- Provide a ductwork connection to basement storage
- Connect building distribution network to building equipotential bonding
- Frequency range broadband cable network $\mathrm{BC}: 47-862 \mathrm{MHz}$
- Frequency range SAT-IF: $950-2400 \mathrm{MHz}$
- Dimension aerial sockets for broadband
- Shielding efficiency building distribution network min. 75 dB better according to Class A

Aerial system terrestrial and/or broadband cable BK in tree structure
1: Amplifier
2: Aerial socket 2-hole Pass-through socket order no. 4515
3: Terminal resistor order no. 4503

Aerial system terrestrial and/or broadband cable BK in radial structure

## 1: Amplifie

2: Tap
Aerial socket 2-hole Single socket order no. 4502
4: Terminal resistor order no. 4503
If only 1 aerial socket is available in a broadband cable system, a through box with terminating resistor must be used.

Aerial system terrestrial and/or broadband cable BK in tree/radial structure

```

4: Terminal resistor order no. 4503
```

SAT aerial system with single universal LNB for analog and digital reception of a satellite.
1: Aerial socket 3-hole single socket order no. 4522
2: Switch for insertion of terrestrial signals e.g. for regional FM/TV
reception.

SAT aerial system with 2 squinting single universal LNBs e.g. for Astra and Eutelsat reception For analog and digital reception.

## 1: Aerial socket 3-

2: DisEqC switch
4-hole single socket order no. 4594
4 -hole aerial socket for viewing one channel and recording another

SAT aerial system with Quattro switch LNB e.g. for 4 receivers, e.g. $4 \times$ Astra. For analog and digital reception of a satellite.

1. Angle socket order no. 4522

2: Aerial socket 4-hole
Single socket order no. 4594

Aerial system SAT with single universal LNB for approx. 3 aerial sockets. For analog and digital reception of a satellite. Also for use behind a multi-switch!
1: Aerial socket 3-hole pass-through socket order no. 4593
2: Aerial socket 3 -hole single socket order no. 4522
Function: If both aerial sockets are used at once, the plane (horizontal or vertical) is determined at the first
second aerial socket.

Aerial system SAT with Quattro universal LNB for analog and digital reception of a satellite, e.g. Astra. 1: Multi-switch with amplifie
.A Aerial socket 4 -hol single socket order no. 4522
alternatively 4 -hole aerial socket for viewing
one channel and recording another.
4: optional switch or amplifier only when the terrestrial input is
being used.
By cascadable multi-switches and taps/distributors expandable to
$>100$ subscribers optionally with terrestrial input as an alternative

SAT aerial system with 2 squinting Quattro universal LNBs for analog and digital reception of two satellites e.g. Astra and Eutelsat.
1: Multi-switch with amplifier
2: Aerial socket 3-hole single socket order no. 4522 alternatively 4 -hole aerial socket for viewing one channel and recording another.
4: optional switch or amplifier only when the terrestrial input is being used e.g. for regional FM/TV 1 reception. 1

By cascadable multi-switches and taps/
distributors expandable to $>100$ subscriber
optionally with terrestrial input as an alternative.

Antenna system SAT single-cable solution with Quattro Switch LNB for digital reception of a satellite, e.g. Astra or Eutelsat.

## 1. SAT antenna from Hirchmann type CS 40

2: Amplifier from Hirschmann type: GNS 320
3: Digital single-cable system device from Hirschmann type: CEF 211 D 4: Distributor 4gang from Hirschmann type: VFC 0741 SF
6: Terminating resistor order no. 4503
Functional only with the specified types.
Antenna system SAT single-cable solution in combination Multiswitch on Quattro Switch LNB for digital reception of a satellite, e.g. Astra or Eutelsat.
1: SAT antenna from Hirschmann type: CS 400 2: Amplifier from Hirschmann type: GNS 320 4: Distributor from Hirschmann type: VFC 0421 SF 4. Digital single-cable system device from Hirschman type: CEF 211 D
6: Multiswitch from Hirschmann type: CKR 5041 7: Distributor from Hirschmann type: VFC 0631 S 8: Aerial socket 3-hole single box Order no.: 4522 9: Aerial socket 3-hole throughpass socket Order no. 4523
10: Aerial socket 4-hole single box order no. 4594
11: Terminating resistor order no. 4503
Functional only with the specified types.

SAT aerial system with twin universal LNB for 2 receivers or twin receiver for viewing one channel and recording another,

## e.g. $2 \times$ Astra.

SAT aerial system with 2 squinting single universal LNBs e.g. for Astra and Eutelsat reception For analog and digital reception of two satellites.

## 1: Aerial socket 3

2: DiSEqC switch
regional FM/TV reception.

## S-Video module

The S-Video (also known as Separate Video, Y/C) module is used in order to transmit brightness (luminance) and colour (chrominance) information separately. The cable length should not exceed 10 m .

\section*{PIN Transfer signal

1 Luminance $(Y)$ earth

\section*{2 Chrominance (C) earth

## 2 Chrominance (C) earth <br> 3 Intensity (luminance) Y

4* Colour (chrominance) C

## Cinch module

Cinch (RCA) designates a standardised connector for transmission of electrical signals, preferably via coaxial cables. The use of other types of cables is not widespread, but is possible.

## Connection variants on ISDN-S $\mathrm{S}_{0}$ bus

Pin assignment of FCC socket outlets

Contact assignment FCC RJ45

## Definition of terms

Resolution Measure of the size of a picture, measured by the number of pixels (pixel density) or in the number of rows and columns (width and height).

HDCP (High Bandwidth Digital Content Protection) Copy protection for high bandwidth digital program contents in conjunction with DVI and HDMI.

MPEG (Moving Video Expert Group) Reduction method for image and sound data. In contrast to analogue methods (here, 25 complete images with all the relevant information are transmitted per second), the MPEG method uses only actual image changes and calculates the full image to be displayed.

DVB (Digital Video Broadcasting) Standardised method to transmit compressed (MPEG-2, H.264) digital content (TV, radio, multi-channel sound, spatial sound, interactive services). DVB-S stands for satellite transmissi-

## Interface standards

USB (Universal Serial Bus) [USB / jack socket, order no. 331539 ..] Serial bus system to connect computer systems and display devices to external devices or storage media. Connection is possible during operation. The properties of connected devices are detected automatically. For home cinemas, storage media such as USB sticks and hard drives help to expand the recording devices for connection to pure playback devices

HDMI (High Definition Multimedia Interface) [High Definition socket, order no. 331542 ..] Interface for fully-digital transmission of audio and video data. HDMI video data are reverse-compatible to DVI-D.

DVI (Digital Video Interface) Standard interface for transmitting image data. This interface can be used to connect display devices such as LCD displays, projects, TFT monitors, plasma displays or video cameras to the graphics card of a computer.

Video transmission signals:

- DVI-I: analogue and digital
- DVI-D: digital
- DVI-A: analogue

## Audio standards

Dolby® Digital (also termed 5.1 sound) Digital multichannel audio system for cinemas and home cinemas. Successor system to Dolby Surround (or DQDoLay also Dolby 2.0). Dolby® Digital supports up to 6 discreet channels ( 5 loudspeakers, 1 subwoofer) and uses imperfect data compression

Dolby® TrueHD Loss-free audio codec, specially developed for use on Blu-ray.

## DCDOLBY tRUEHE

## Video standards

HD ready Technical specification for a device to play back high-definition television (HDTV):

- Analogue component input (YPbPr / YUV)
- Digital, copy-protection-capable (HDCP) input (DVI-D/-I or HDMI)
- Support of the HD video formats 720p and 1080i (for $50 / 60 \mathrm{~Hz}$ image repeat rate)

Full HD Ability of a HDTV-compatible device (receiver, TV, DVD player, video camera, games console, etc.), to output or record HD resolutions. Due to different manufacturer designs (1080p full images, 1080i half images), this is not an indication of the image quality, image dimension or the display output of the device

HDTV (High Definition Television) Global digital recording, production and transmission standard for television with a usable image resolution of up to $1920 \times 1080$ pixels in a 16:9 format.

|  | PAL | HDTV |  |
| :---: | :---: | :---: | :---: |
|  |  | $\begin{aligned} & \text { HD ready } \\ & (720 \mathrm{p}) \end{aligned}$ | $\begin{gathered} \text { Full HD } \\ (1080 \mathrm{i} / 1080 \mathrm{p})^{\star} \end{gathered}$ |
| Logo |  | $\begin{aligned} & \text { FID } \\ & +m=7 \end{aligned}$ | [180] |
| Vertical resolution (image lines) | 576 | 720 | 1080 |
| Horizontal resolution (image columns) | 720 | 1280 | 1920 |
| Pixels (max.) | 414720 | 921600 | $>2$ million |
| format | 4:3 | 16:9 | 16:9 |
| Frequency | 50 Hz | $50-60 \mathrm{~Hz}$ | $50-60 \mathrm{~Hz}$ |

Table 1: TV standards and data
*1080i (interlaced, half image method)
Advantage: Half transmission rate
Disadvantage: Half images must be recombined through a converter in the TV device
*1080p (progressive, full image method)
Advantage: No subsequent combination of the images requires, as all 1080 are shown simultaneously with full pixel accuracy within a frame Disadvantage: Very high transmission rate

| Analogue video formats |  |
| :--- | ---: |
| VHS | $320 \times 200$ pixels |
| Hi8 | $576 \times 420$ pixels |
| S-VHS | $640 \times 480$ pixels |
| Digital video formats | $352 \times 288$ pixels |
| VCD | $576 \times 480$ pixels |
| SVCD | max. $720 \times 576$ pixels |

Table 2: Resolution of current PAL video formats
Video images with a low resolution of a $4: 3$ side ratio (SD, standard definition) must be scaled up for playback on HDTV devices. Detail losses lead to a poorer image quality.

Figure 1: Format comparison

## Connectors

Jack connector [USB / jack socket, order no. 331539 ..]

Right channel
(usually 2.5 or 3.5 mm Ø) to connect portable audio playback devices (e.g. iPod CD/DVD or MP3 player) to AV receiver or amplifier.

Relay switch, 2gang

Relay switch 2gang with time function/
controller power pack 2gang
PIR motion detector with 2 relay contacts
Timer with sensor connection
and relay contact
Timer with relay contact and
radio bidirectional

PIR motion detector
with relay contact

PIR IR motion detector with relay contact

IR motion detector with relay contact and radio

PIR presence detector
with relay contact

PIR IR motion detector with 2 relay contacts

PIR presence detector with 2 relay contacts

Relay switch/switch actuator 4gang with radio receiver

Adapter plug actuator with radio receiver

Adapter plug actuator with radio bidirectional

Extension unit, electronic

PIR motion detector extension unit
 unit

Electronic transformer
m)) Radio repeater, signal amplifier

knx KNX / KNX radio bidirectional ((1)) gateway

Rotary dimmer rotary control units

Rotary dimmer with on/off switch

Rotary dimmer with change-over switch
-

1-10 V rotary potentiometer with on/off switch

1-10 V rotary potentiometer with NO contact push-button

DALI rotary potentiometer with on/off switch

DALI rotary potentiometer with on/off switch and power supply

Speed controller with on/off switch and additional contact

## Touch dimmer touch control units

$\stackrel{4}{4}$

Touch dimmer

Touch dimmer with radio receiver

Adapter plug dim actuator with radio receiver

Touch dimmer with radio bidirectional

PIR motion detector with dim function

PIR IR motion detector with dim function

PIR motion detector with radio bidirectional and dim function

PIR presence detector with dim function
$1-10 \vee$ touch control unit

1-10 V touch control unit with IR-
receiver
1-10 V touch control unit with radio receiver

1-10 V touch control unit with PIR motion detector

1-10 V touch control unit with PIR presence detector

1-10 V touch control unit with PIR IR motion detector

DALI touch control unit with IR receiver

Series touch dimmers

Series touch dimmer / dim actuator 2gang with radio bidirectional

Dim actuator 4gang with radio bidirectional

Power booster for dimmer
Reneral applications

Wireless components

## Data / Telecommunication

VGA socket outlet

S-Video socket outlet

Cinch socket outlet

Security and safety systems
Key switches
Motion detectors general

Siren

Alarm siren with rotating lightSmoke detectors

- Magnetic contact

ミ Radio magnetic contact

alarm central unit

KNX alarm central unit

1
Strike plate contact
lock switch contact
Blocking element
$\mathrm{P}-$
Glass breakage detector

Alarm distribution terminal

Overvoltage protection module

Residual current circuit-breaker

Making current limiter
HVAC components

## $\stackrel{9}{\infty}$

Room thermostat with NO contact and timer

Thermostat with NO contact, sensor and timer

Room thermostat with NC contact, on/off switch and lamp

Thermostat with NO contact, sensor, on/off switch and lamp

Room thermostat with changeover
reme

## Consumer electronics

 door communication
## FM以

VHF radio

D
Amplifier

D

$Y$
Antenna

## Klinik installation

(Double pole) socket outlet for floating output

## Sensors/inputs

Brightness sensor

Wind sensor

Rain sensorBinary input 2gang radio bidirectional

Radio binary input 2gang/ push-button interface 2gang / transmitter 2gang UP54 Radio binary input 4gang
